The Metal-Driven Biogeochemistry of Gaseous Compounds in the Environment

Peter M.H. Kroneck,Martha E. Sosa Torres,2014-11-22 MILS 14 provides a most up to date view of the exciting biogeochemistry of gases in our environment as driven mostly by microorganisms These employ a machinery of sophisticated metalloenzymes where especially transition metals such as Fe Ni Cu Mo W play a fundamental role that is in the activation transformation and syntheses of gases like dihydrogen methane carbon monoxide acetylene and those of the biological nitrogen and sulfur cycles The Metal Driven Biogeochemistry of Gaseous Compounds in the Environment is a vibrant research area based mainly on structural and microbial biology inorganic biological chemistry and environmental biochemistry All this is covered in an authoritative manner in 11 stimulating chapters written by 26 internationally recognized experts and supported by nearly 1200 references informative tables and about 100 illustrations two thirds in color MILS 14 also provides excellent information for teaching Peter M H Kroneck is a bioinorganic chemist who is exploring

the role of transition metals in biology with a focus on functional and structural aspects of microbial iron copper and molybdenum enzymes and their impact on the biogeochemical cycles of nitrogen and sulfur Martha E Sosa Torres is an inorganic chemist with special interests in magnetic properties of newly synthesized transition metal complexes and their reactivity towards molecular oxygen applying kinetic electrochemical and spectroscopic techniques

### **Interrelations**

**between Essential Metal Ions and Human Diseases** Astrid Sigel, Helmut Sigel, Roland K.O. Sigel, 2014-01-27 MILS 13 provides an up to date review on the relationships between essential metals and human diseases covering 13 metals and 3 metalloids. The bulk metals sodium, potassium, magnesium and calcium plus the trace elements manganese, iron, cobalt, copper, zinc, molybdenum and selenium, all of which are essential for life. Also covered are chromium, vanadium, nickel, silicon and arsenic, which have been proposed as being essential for humans in the 2nd half of the last century. However, if at all they are needed only in ultra trace amounts and because of their prevalence in the environment it has been difficult to prove whether or not they are required. In any case all these elements are toxic in higher concentrations and therefore transport and cellular concentrations of at least the essential ones are tightly controlled hence their homeostasis and role for life including deficiency or overload and their links to illnesses including cancer and neurological disorders are thoroughly discussed. Indeed it is an old wisdom that metals are indispensable for life. Therefore Volume 13 provides in an authoritative and timely manner in 16 stimulating chapters written by 29 internationally recognized experts from 7 nations and supported by more than 2750 references and over 20 tables and 80 illustrations many in color a most up to date view on the vibrant research area of the Interrelations between Essential Metal Ions and Human Diseases

**Organometallics in Environment and Toxicology** Astrid Sigel, Helmut Sigel, Roland K.O. Sigel, 2015-07-24 Volume 7 devoted to the vital and rapidly expanding research area around metal carbon bonds see also MILS 6 focuses on the environment. With more than 2500 references, 35 tables and nearly 50 illustrations many of these in color it is an essential resource for scientists working in the wide range from organometallic chemistry, inorganic biochemistry, environmental toxicology, all the way through to physiology and medicine. In 14 stimulating chapters written by 29 internationally recognized experts Organometallics in Environment and Toxicology highlights in an authoritative and timely manner environmental cycles of elements involving organometal loid compounds as well as the analytical determination of such species. This book examines methane formation involving the nickel coenzyme F430 as well as the organometal loid compounds formed by tin, lead, arsenic, antimony, bismuth, selenium, tellurium and mercury. In addition it deals with the environmental bioindication, biomonitoring and bioremediation of organometal loid s and it terminates with methylated metal loid species occurring in humans by evaluating assumed and proven health effects caused by these compounds

**Metallomics and the Cell** Lucia Banci, 2013-04-18 Metallomics and the Cell provides in an authoritative and timely manner in 16 stimulating chapters written by 37 internationally recognized experts from 9 nations and supported by more than 3000 references several tables and 110 illustrations mostly in color a

most up to date view of the metallomes which as defined in the omics world describe the entire set of biomolecules that interact with or are affected by each metal ion. The most relevant tools for visualizing metal ions in the cell and the most suitable bioinformatic tools for browsing genomes to identify metal binding proteins are also presented. Thus MILS 12 is of relevance for structural and systems biology, inorganic biological chemistry, genetics, medicine, diagnostics as well as teaching etc.

**Metal Ions in Biological Systems**, 1986    **The Alkali Metal Ions: Their Role for Life** Astrid Sigel, Helmut Sigel, Roland K. O. Sigel, 2016-02-09 MILS 16 provides an up to date review of the impact of alkali metal ions on life. Their bioinorganic chemistry and analytical determination, the solid state structures of bio ligand complexes and the properties of alkali metal ions in solution in the context of all kinds of biologically relevant ligands are covered. This includes proteins, enzymes and nucleic acids. G quadruplexes Minerals containing sodium Na and potassium K are abundant in the Earth's crust making Na and K easily available. In contrast the alkali elements lithium Li, rubidium and cesium are rare and the radioactive francium occurs only in traces. Since the intra and extracellular as well as the compartmental concentrations of Na and K differ significantly, homeostasis and active transport of these ions are important. This involves transporters, carriers and pore forming ion channel proteins. Systems like Na/K ATPases, H/K ATPases or Na/H antiporters are thoroughly discussed. The role of K in photosynthesis and the role of Na in charging the battery of life are pointed out. Also the relationships between alkali metal ions and diseases e.g. Parkinson or traumatic brain injury are covered and the relevance of Li salts in medicine, pharmacology and mechanism is reviewed. This and more is treated in an authoritative and timely manner in the 16 stimulating chapters of Volume 16 *The Alkali Metal Ions Their Role for Life* which are written by 44 internationally recognized experts from 12 nations. The impact of this vibrant research area is manifested in nearly 3000 references over 30 tables and more than 150 illustrations, two thirds in color. MILS 16 also provides excellent information for teaching. Astrid Sigel, Helmut Sigel and Roland K.O. Sigel have long standing interests in Biological Inorganic Chemistry. Their research focuses on metal ion interactions with nucleotides and nucleic acids and on related topics. They edited previously 44 volumes in the series *Metal Ions in Biological Systems*.

### **Sustaining Life on Planet Earth: Metalloenzymes Mastering**

**Dioxygen and Other Chewy Gases** Peter M. H Kroneck, Martha E. Sosa Torres, 2015-02-23 MILS 15 provides an up to date review of the metalloenzymes involved in the activation, production and conversion of molecular oxygen as well as the functionalization of the chemically inert gases methane and ammonia. Found either in aerobes, humans, animals, plants, microorganisms or in anaerobes, so called impossible bacteria, these enzymes employ preferentially iron and copper at their active sites in order to conserve energy by redox driven proton pumps to convert methane to methanol or ammonia to hydroxylamine or other compounds. When it comes to the light driven production of molecular oxygen, the tetranuclear manganese cluster of photosystem II must be regarded as the key player. However, dioxygen can also be produced in the dark by heme iron dependent dismutation of oxyanions. *Metalloenzymes Mastering Dioxygen and Other Chewy Gases* is a vibrant

research area based mainly on structural and microbial biology inorganic biological chemistry and environmental biochemistry All this is covered in an authoritative manner in 7 stimulating chapters written by 21 internationally recognized experts and supported by nearly 1100 references informative tables and over 140 illustrations many in color MILS 15 provides excellent information for teaching it is also closely related to MILS 14 The Metal Driven Biogeochemistry of Gaseous Compounds in the Environment Peter M H Kroneck is a bioinorganic chemist who is exploring the role of transition metals in biology with a focus on functional and structural aspects of microbial iron copper and molybdenum enzymes and their impact on the biogeochemical cycles of nitrogen and sulfur Martha E Sosa Torres is an inorganic chemist with special interests in magnetic properties of newly synthesized transition metal complexes and their reactivity towards molecular oxygen applying kinetic electrochemical and spectroscopic techniques
