Critical Surveys of Data Sources: Mechanical Properties of Metals R. B. Gavert, Robert Lowell Moore, Jack Hall Westbrook, 1974 **Critical Surveys of Data Sources** ,1976 **NBS Special Publication** ,1976 The NBS Alloy Data Center Gesina C. Carter, 1968 The Alloy Data Center part of the National Standard Reference Data System has two primary functions One is to stimulate cooperation and coordination among the existing data centers in the area of the physical properties of well characterized alloys The final data generated by these centers for publication should be consistent with one another where correlation or possible overlap exists The other purpose is the collection from publications as well as private communications evaluation and publication of data in some areas where special competence exists in the Alloy Physics Section Of interest to the center are metals semimetals intermetallic compounds and alloys Excluded are those materials which have ill defined constitutions and heat treatments An automated system was developed to meet the bibliographic needs of the center This system will be described as well as the specific properties of interest The system presently contains a complete annotated file dealing with NMR Knight shift measurements The soft X ray spectroscopy compilation is being kept up to date with the same system Author **Recommended Values of Thermophysical Properties for Selected Commercial Alloys** K. C. Mills, 2002 *Smithells Metals Reference Book* William F. Gale, Terry C. Totemeier, 2003-12-09 Smithells is the only single volume work which provides data on all key aspects of metallic materials Smithells has been in continuous publication for over 50 years This 8th Edition represents a major revision Four new chapters have been added for this edition these focus on Non conventional and emerging materials metallic foams amorphous metals including bulk metallic glasses structural intermetallic compounds and micro nano scale materials Techniques for the modelling and simulation of metallic materials Supporting technologies for the processing of metals and alloys An Extensive bibliography of selected sources of further metallurgical information including books journals conference series professional societies metallurgical databases and specialist search tools One of the best known and most trusted sources of reference since its first publication more than 50 years ago The only single volume containing all the data needed by researchers and professional metallurgists Fully updated to the latest revisions of international standards **NBS Technical Note** ,1968-08 Metals Handbook American Society for Metals, 1973 **Thermal Conductivity 18 T.** Ashworth, David R. Smith, 2012-12-06 The International Thermal Conductivity Conference was started in 1961 with the initiative of Mr Charles F Lucks who passed away on 8 July 1982 and to the memory of whom this volume is dedicated These Conferences on thermal conductivity grew out of the needs of researchers in the field The Conferences were held annually from 1961 to 1973 and have been held biennially since 1975 when our Center for Information and Numerical Data Analysis and Synthesis CINDAS of Purdue University became the Permanent Sponsor of the Conferences These Conferences provide a broadly based forum for researchers actively working on the thermal conductivity and closely related properties to convene

on a regular basis to exchange their ideas and experiences and report their findings and results The Conferences have been self perpetuating and are an example of how a technical community with a common purpose can transcend the invisible artificial barriers between disciplines and gather together in increasing numbers without the need of national publicity and continuing funding support when they see something worthwhile going on It is believed that this series of Conferences not only will grow stronger but will set an example for researchers in other fields on how to jointly attack their own problem areas

Metals Handbook: Metallography, structures, and phase diagrams, 1973 *The Chemistry of Transition Metal Carbides and Nitrides* S.T. Oyama, 2012-12-06 This book arose from a symposium titled Transition Metal Carbides and Nitrides Preparation Properties and Reactivity organized by Jae Sung Lee Masatoshi Nagai and myself The symposium was part of the 1995 Congress of Pacific Rim Chemical Societies held in Honolulu Hawaii between December 17 22 1995 The meeting was the first major conference to exclusively address the theme of metal carbides and nitrides and brought together many of the major researchers in the field Over 50 scientists and engineers reported their latest findings in five sessions of presentations and discussions The book closely follows the topics covered in the conference Theory of bonding Structure and composition Catalytic properties Physical properties New methods of preparation Spectroscopy and microscopy The book is unique in its coverage It provides a general introduction to the properties and nature of the materials but also covers their latest applications in a wide variety of fields It should thus be of interest to both experts and nonexperts in the fields of material science solid state chemistry physics ceramics engineering and catalysis The first chapter gives an overview and many of the chapters provide summaries of advanced topics All contributions were peer reviewed
