Metaphorical Eye:

The Evil Eye in the Bible and in Rabbinic Literature Rivka Ulmer, 1994 Jewish belief in the power of the evil eye aroused and energized by emotions such as jealousy and mean spiritedness has been a common concern in Jewish life from earliest times The everpresent fear of its malevolent power is expressed by the common Yiddish expression *kein ahoro* which means literally without an evil eye *Kein ahoro* is intended to ward off any potential evil eye when one speaks of one's favorable prospects Sephardic Jews have been concerned with it as well and like the Ashkenazim their Jewish ritual life has incorporated ways of protecting against it Dr Ulmer's book examines this idea in its many permutations in Rabbinic literature In particular she examines its origin in people's negative emotions and its effects on its victims in many phases of life in causing death and sickness for example or its role in sexual transgression etc The Angel of Death is depicted as having many eyes and early Jewish mystical literature depicts angels in general as covered with eyes On the other hand the good eye has many positive meanings and these are discussed as well Dr Ulmer's study provides the reader with a complete view of the numerous symbolic meanings which this most important sense organ has been given in Jewish culture Book Jacket

Corpus-Based Approaches to Metaphor and Metonymy Anatol Stefanowitsch, Stefan Th. Gries, 2008-08-22 The papers in this volume deal with the issue of how corpus data relate to the questions that cognitive linguists have typically investigated with respect to conceptual mappings The authors in this volume investigate a wide range of issues the coherence and function of particular metaphorical models the interaction of form and meaning the identification of source domains of metaphorical expressions the relationship between metaphor and discourse the priming of metaphors and the historical development of metaphors The studies deal with a variety of metaphorical and metonymic source and target domains including the source domains SPACE ANIMALS BODY PARTS ORGANIZATIONS and WAR and the target domains VERBAL ACTIVITY ECONOMY EMOTIONS and POLITICS In their studies the authors present a variety of corpus linguistic methods for the investigation of conceptual mappings for example corpora annotated for semantic categories concordances of individual source domain items and patterns and concordances of target domain items In sum the papers in this volume show how a wide range of corpus linguistic methods can be used to investigate a variety of issues in cognitive linguistics the combination of corpus methods with a cognitive linguistic view of metaphor and metonymy yields new answers to old questions and to new questions about the relationship between language as a conceptual phenomenon and language as a textual phenomenon **Finding Metaphor in Grammar and Usage** Gerard Steen, 2007 Cognitive linguists have proposed that metaphor is not just a matter of language but of thought and that metaphorical thought displays a high degree of conventionalization In order to produce converging evidence for this theory of metaphor a wide range of data is currently being studied with a large array of methods and techniques *Finding Metaphor in Grammar and Usage* aims to map the field of this development in theory and research from a methodological perspective It raises the question when exactly evidence

for metaphor in language and thought can be said to count as converging. It also goes into the various stages of producing such evidence: conceptualization, operationalization, data collection and analysis, and interpretation. The book offers systematic discussion of eight distinct areas of metaphor research that emerge as a result of approaching metaphor as part of grammar or usage, language or thought, and symbolic structure or cognitive process.

The Camera-Eye Metaphor in Cinema Christian Quendler, 2016-11-18. This book explores the cultural, intellectual, and artistic fascination with camera-eye metaphors in film culture of the twentieth century. By studying the very metaphor that cinema lives by, it provides a rich and insightful map of our understanding of cinema and film styles and shows how cinema shapes our understanding of the arts and media. As current new media technologies are attempting to shift the identity of cinema and moving imagery, it is hard to overstate the importance of this metaphor for our understanding of the modalities of vision. In what guises does the camera-eye continue to survive in media that is called new?

The Metaphorical Brain Seana Coulson, Vicky T. Lai, 2016-03-09. Metaphor has been an issue of intense research and debate for decades. See, for example:

1. Researchers in various disciplines including linguistics, psychology, computer science, education, and philosophy have developed a variety of theories, and much progress has been made.
2. For one, metaphor is no longer considered a rhetorical flourish that is found mainly in literary texts. Rather, linguists have shown that metaphor is a pervasive phenomenon in everyday language, a major force in the development of new word meanings, and the source of at least some grammatical function words.
3. Indeed, one of the most influential theories of metaphor involves the suggestion that the commonality of metaphoric language results because cross-domain mappings are a major determinant in the organization of semantic memory, as cognitive and neural resources for dealing with concrete domains are recruited for the conceptualization of more abstract ones.
4. Researchers in cognitive neuroscience have explored whether particular kinds of brain damage are associated with metaphor production and comprehension deficits, and whether similar brain regions are recruited when healthy adults understand the literal and metaphorical meanings of the same words. See 5 for a review.

Whereas early research on this topic focused on the issue of the role of hemispheric asymmetry in the comprehension and production of metaphors, 6 in recent years cognitive neuroscientists have argued that metaphor is not a monolithic category and that metaphor processing varies as a function of numerous factors, including the novelty or conventionality of a particular metaphoric expression, its part of speech, and the extent of contextual support for the metaphoric meaning. See e.g. 7, 8, 9. Moreover, recent developments in cognitive neuroscience point to a sensorimotor basis for many concrete concepts and raise the issue of whether these mechanisms are ever recruited to process more abstract domains. 10. This Frontiers Research Topic brings together contributions from researchers in cognitive neuroscience whose work involves the study of metaphor in language and thought in order to promote the development of the neuroscientific investigation of metaphor. Adopting an interdisciplinary perspective, it synthesizes current findings on the cognitive neuroscience of metaphor, provides a forum for voicing novel perspectives, and promotes avenues for new research on the

Metaphor, Riddles, and the Origin of Language Marcel Danesi, 2024-04-08 Scientific evidence for the origin of speech is abundant but evidence for the origin of language as separate from speech as a naming system remains speculative What evidence can be utilized that will furnish relevant insights on the origin or language This book attempts to provide an answer by suggesting that the first riddles of humanity along with the first myths reveal that language may have emerged as a mode of reflection via metaphor a mode that involves blending speech forms together to produce complex abstract cognition

Thinking with Metaphors in Medicine Alan Bleakley, 2017-07-06 While medical language is soaked in metaphor medicine that is medical culture clinical practice and medical education outwardly rejects metaphor for objective literal scientific language Arguing that this is a misstep this book critically considers what embracing the use of metaphors similes and aphorisms might mean for shaping medical culture and especially the doctor patient relationship in a healthy way It demonstrates how the landscape of medicine may be reshaped through metaphor shift and is an important work for all those interested in the use of language in medicine

Perception and Metaphor Qin Xiugui, Tie Yi, 2021-07-28 Cognitive linguists believe that metaphors are prevalent in human thought while metaphorical structures are reflected at the linguistic level Therefore analysing extensive language data can aid in revealing the metaphorical mappings of embodied experience with the senses of vision hearing smell taste touch and temperature This volume seeks to discover the similarities and differences between the metaphorical systems of the English and Chinese languages Adopting a comparative view the authors examine the semantic extensions of perception words in English and Chinese in order to reveal the metaphorical scope of each sense and the metaphorical system behind it They argue that the metaphorical systems of the senses not only help us understand and use conventionalised metaphorical expressions but also allow us to create novel expressions The findings also unveil how abstract concepts are constructed via cognitive mechanisms such as image schema
