**Post-Translational Modifications (PTMs) in Human Cancer: Pharmacological Insights and Therapeutic Opportunities** Lei Huang, Hang Song, Pedro Ayuso Parejo, 2025-08-21 Human cancer is a complex and heterogeneous group of diseases characterized by uncontrolled cell growth and proliferation Post translational modifications PTMs of proteins play a critical role in cancer development and progression PTMs are chemical modifications that occur after a protein is synthesized and can significantly impact the function localization stability and activity of proteins within a cell Pharmacology is a field of medicine that focuses on the study of drugs and their effects on the human body Pharmacological interventions that target PTMs are a promising area of cancer research and treatment For example PARP Inhibitors Poly ADP ribose polymerase PARP inhibitors are a class of drugs that exploit defects in DNA repair mechanisms particularly in cells with BRCA mutations These inhibitors target the PARP protein which plays a role in DNA repair through PTM processes PARP inhibitors like olaparib and rucaparib have been approved for the treatment of ovarian and breast cancers Ubiquitin Proteasome System UPS Inhibitors The UPS is responsible for the degradation of specific proteins tagged with ubiquitin Some drugs such as bortezomib inhibit the UPS leading to the accumulation of ubiquitinated proteins and apoptosis in cancer cells SUMOylation Inhibitors Small ubiquitin like modifier SUMO modification is a PTM that regulates the activity of various proteins Recent research has explored the development of SUMOylation inhibitors to target specific cancer related proteins These are still in the experimental stage The effectiveness of these treatments varies depending on the specific cancer type genetic mutations and individual patient characteristics It is important to note that the development and application of these therapies often require a deep understanding of the specific PTMs and their roles in the molecular pathways of different cancer types Additionally personalized medicine approaches are becoming increasingly common tailoring treatments based on the unique PTM profiles and genetic mutations of individual patients tumors Personalized medicine also known as precision medicine is being pursued in cancer treatment for several compelling reasons and it offers several benefits compared to more traditional one size fits all approaches Personalized medicine offers targeted treatment increased treatment efficacy reduced side effects and optimized drug selection among many other benefits This Research Topic will focus on post translational modifications PTMs and their role in human cancer within the field of pharmacology This is a highly relevant and significant area of study as understanding how PTMs contribute to cancer development and progression is critical for the development of targeted pharmacological interventions We welcome contributions in the form of Original Research Articles Reviews and Mini Reviews that cover but are not limited to the following topics a Post Translational Modifications PTMs in Cancer Molecular Mechanisms b Pharmacological Approaches Targeting PTMs in Cancer c Personalized Medicine and PTM Profiles d Emerging

Trends and Future Directions Please note that If patient data are analyzed a comprehensive description of the patients including sex age diagnostic criteria inclusion and exclusion criteria disease stage therapy received comorbidities as well as additional clinical information and assessment of clinical response effects should be included If genetic proteomics metabolomics or other omics data are analyzed a comprehensive description of the methods and the rationale for the selection of the specific data studied should be provided Studies related to natural compounds herbal extracts or traditional medicine products will not be included in this Research Topic Studies solely based on the analysis of public databases or published evidence with no further experimental insights or experimental validation will not be included in this Research Topic

establishment of a pre warning and early diagnosis system It also presents clinical applications and prospects The book provides a valuable reference for researchers in nanomedicine and clinicians involved in gastric cancer and radiology

**INTRODUCTION FOR LIVER 3D BIOPRINTING - BOOK 1** Edenilson Brandl,2024-05-19 The field of 3D bioprinting is rapidly evolving offering unprecedented opportunities for medical and scientific advancements Introduction for Liver 3D Bioprinting Book 1 Introduction to Cell Biology is the first volume in a comprehensive series dedicated to exploring the intricate relationship between cellular biology and 3D bioprinting technology specifically focusing on the liver This book serves as a foundational text aiming to bridge the gap between basic cell biology and its application in bioprinting Understanding the principles of cell biology is crucial for anyone involved in tissue engineering regenerative medicine and 3D bioprinting as it provides the essential knowledge needed to manipulate and cultivate cells effectively In this volume we delve into various aspects of cell biology including the mechanisms of cellular processes the roles of different cellular structures and the intricacies of cellular signaling pathways These topics are meticulously chosen to provide a broad yet detailed overview that sets the stage for more specialized discussions in subsequent volumes Our goal is to equip researchers students and professionals with the knowledge required to innovate and excel in the field of 3D bioprinting Each chapter is designed to build a strong conceptual framework facilitating a deeper understanding of how cellular functions can be harnessed and manipulated for bioprinting applications As you embark on this journey through the cellular world we hope this book will inspire new ideas foster scientific curiosity and contribute to the growing body of knowledge in the field of bioprinting Whether you are a seasoned researcher or new to the subject this text aims to provide valuable insights and a solid foundation in cell biology essential for advancing the science and application of 3D bioprinting Thank you for joining us in exploring the fascinating intersection of cell biology and 3D bioprinting We look forward to seeing the innovative solutions and breakthroughs that will emerge from your understanding and application of the concepts presented in this book

**Condense Wisdom and Conquer Cancer for the Benefit of Mankind** Zu Xe,Zu Jie,Bin Wu,2018-02-14 This book is meant to help with conquering cancer launching a total attack and building the scientific city of conquering cancer The overall design and the planning and the blueprint of XZ Cs plans of conquering cancer are the scientific thinking and the theoretical innovation and the experimental basis of conquering cancer are the reform and development of the overall strategy of cancer treatment It is the crystallization of my sixty years of experience in medical work and thirty years of the scientific research results and achievement the scientific and technological innovation the scientific thinking and the scientific research wisdom The direction of the research is to conquer cancer It is proposed that a test area will be set up in Wuhan City Huang Jiahu University City and the implementation of this research program will be done by my research team of experts professors and so on The scientific research plan of conquering cancer puts the focus on scientific research in the international front and it is the forefront of science In January 12 2016 the US president Barack Obama in the State of the

Union address addressed the national cancer program to conquer cancer and named the new moon plan Cancer Moonshot. The vice president Joe Biden was responsible for the implementation. Its specific plan is unknown. Cancer is a disaster of mankind. We struggle with cancer all over the world and people of the world struggle together, gather wisdom and move forward together to overcome cancer. Cancer disaster covers the world. The people worldwide are eager to overcome cancer one day. It is the urgent hope that the states, the governments, the experts, the scholars and the scientists can find anticancer measures to keep people from cancer.
