A Meteorite Killed My Cow Richard Greenwood,2024-05-08 Meteorites are generally considered to be bizarre and exotic space junk that you only ever come across in museums But the reality is very different Meteorites are generally harmless with the exception of a cow in Venezuela and a few dinosaurs Well quite a few dinosaurs in fact They are arriving on Earth every day everywhere in the form of fine dust The result is that meteorites can be collected from the rooftops of houses everywhere It s not easy and you need to know what to look for This book will help Meteorites are the oldest rocks in our Solar System and contain grains that are even older These space rocks provide science with the best available evidence concerning the origin and early evolution of the Solar System This book introduces the reader to the fascinating and sometimes bizarre world of space rocks using a simple clear layman friendly style It explains why they are so special and describes their main characteristics The non technical approach used throughout the book make it particularly accessible to the general public and it will be of interest to anyone looking to learn more about these cosmic visitors and the wealth of scientific information they contain Features Provides a concise introduction to the world of meteorites in an accessible and non technical way Demonstrates how meteorites can be found locally and provides practical guidance on how to search for them Emphasizes the human side of meteorites and how ordinary people can and do encounter meteorites in a wide variety of settings Extinctions in the History of Life Paul D. Taylor,2004-11-11 Extinction is the ultimate fate of all biological species over 99 percent of the species that have ever inhabited the Earth are now extinct The long fossil record of life provides scientists with crucial information about when species became extinct which species were most vulnerable to extinction and what processes may have brought about extinctions in the geological past Key aspects of extinctions in the history of life are here reviewed by six leading palaeontologists providing a source text for geology and biology undergraduates as well as more advanced scholars Topical issues such as the causes of mass extinctions and how animal and plant life has recovered from these cataclysmic events that have shaped biological evolution are dealt with This helps us to view the biodiversity crisis in a broader context and shows how large scale extinctions have had profound and long lasting effects on the Earth s biosphere *The Horn Book Guide to Children's and Young Adult Books* ,2000 Dinopedia Aman Kotak,2018-11-30 Dinosaurs as referred in our mythological books as Monstrous Lizards which existed from the Triassic

period have been fascinating us from a long time in the Movies Books Museums and much more Paleontologists study and research on them through their fossilized remains Dr Jack Horner a paleontologist and technical advisor of Jurassic Park films also tries to bring them back alive But do we really know what a Dino did on it s daily routine or will they ever return back or were they mentioned in Indian mythology and many more such uncanny questions that remain unanswered Here in my Book Dinopedia The History and Future of Dinosaurs is a glimpse of the world of Dinosaurs then and now

Cosmic Collisions Dana Desonie,2014-01-14 Cosmic collisions have forever shaped the planets in our solar system sculpting Earth and our Moon They are still happening right in our neighborhood as we saw in July 1994 when comet fragments bombarded the surface of Jupiter What if a collision of that magnitude were to occur on Earth Would the effect be anywhere near that of the collision that wiped out the dinosaurs 65 million years ago Scientists have just begun to track distant asteroids and comets that may pose a threat to Earth in years to come In Scientific American Focus Cosmic Collisions Dana Desonie traces the history of cosmic collisions and proposes various solutions to what many view as our impending doom answering these questions and more How often does Earth experience a cosmic collision Did a massive collision kill off the dinosaurs How do scientists track and predict collisions What did we learn from the Jupiter collision of 1994 How real is the threat of a collision in our future How can we defend our planet

Extinctions Michael J. Benton,2023-09-28 In this vast sweep of our Earths history Michael Benton brings the deep past to life as never before Deploying the cutting edge tools in biology chemistry physics and geology that are transforming our understanding of previous environmental cataclysms including the incredible new discovery of a hitherto unknown extinction event he uncovers not only their lethal effects but also the processes that brought about such large scale destruction Beginning with the oldest extinction Benton investigates the Late Ordovician which set the evolution of the first animals on an entirely new course the late Devonian brought on by global warming the cataclysmic End Permian which wiped out over 90 per cent of all life on Earth and book ending the age of the dinosaurs the newly discovered Carnian Pluvial Event and the End Cretaceous asteroid He examines how global warming acid rain ocean acidification erupting volcanoes and meteorite impact have affected conditions on Earth the drastic consequences for global ecology and how life in turn survived adapted and evolved This expert retelling of scientific breakthroughs allows us to link long ago upheavals to our modern crises As todays climate scientists and political leaders grapple to understand these processes and our planet enters the sixth great extinction these insights from the past may hold the key to survival

The Dinosaurs and their Mysterious Demise Andrew Norman,2025-01-16 Explores the captivating history of dinosaurs their reign extinction and presents a new theory on how certain species survived their cataclysmic end The dinosaurs are a source of endless fascination and each new generation is inspired and enchanted by images of these wondrous and awe inspiring creatures that dominated the Earth eons of time ago The smallest was the size of a chicken the largest on record the titanosaur *Argentinosaurus huinculensis* weighed about 95 tons fifteen times as much as an African bull elephant today s
