Introduction

The participation of users and survivors of psychiatry is indispensable in mental health research. In this regard, their expertise is essential to clarify ambiguities and guide public policies and mental health services. Since recovery in mental health has been defined in different ways, achieving a consensus on the main elements that define it has important implications.

Objective

This study aimed to establish an international consensus on the main elements that define recovery from the perspective of users and survivors of psychiatry.

Procedure

We sent the invitation to associations of users and survivors around the world.

101 users and survivors consented to participate.

The Delphi Method

The research team designed three rounds of questioning. The participants received an email with a link to the corresponding questionnaire hosted on the Qualtrics software platform.

The first round

The first questionnaire contained 4 open-ended questions:

- Q1: What does recovery in mental health mean to you?
- Q2: What tells you that a person is progressing in their recovery?
- Q3: What factors facilitate the recovery process?
- Q4: What factors hinder the recovery process?

41 users and survivors completed the questionnaire.

Data analysis

Using a qualitative approach, we analyze the participants' responses to finally develop statements to be rated on their relevance on a Likert scale in the second and third rounds. After the second and third rounds, we calculated the percentage of agreement regarding the relevance of each statement.

The second round

The second questionnaire was structured based on the four questions from the first round. For each question, statements derived from the previous answers were listed.

The statements rated as "relevant" or "very relevant" by at least 80% of the participants reached a consensus. The statements rated as "relevant" or "very relevant" by less than 70% were considered to disagree.

77 users and survivors completed the questionnaire.

The third round

The third questionnaire contained those statements rated as "relevant" or "very relevant" by 70-79% of participants. The questionnaire contained feedback about their previous rating response to each statement and the agreement reached by the entire panel of experts.

77 users and survivors completed the questionnaire.

Results

77 statements were agreed upon as a consensus. You can find in the QR code the statements with the highest agreement (>90%).

Conclusion

The statements that reached the highest percentage of agreement highlight the relevance of human rights, empowerment, and self-determination to the recovery process. Findings contribute to a better understanding of recovery based on the perspective of survivors of psychiatry and users to support public policies and mental health services.

Research Methods in Psychiatry Chris Freeman, Peter J. Tyrer, 1989 **The Perspectives of Psychiatry** Paul R. McHugh, Phillip R. Slavney, 1998-11-29 Substantially revised to include a wealth of new material the second edition of this highly acclaimed work provides a concise coherent introduction that brings structure to an increasingly fragmented and amorphous discipline Paul R McHugh and Phillip R Slavney offer an approach that emphasizes psychiatry's unifying concepts while accommodating its diversity Recognizing that there may never be a single all encompassing theory the book distills psychiatric practice into four explanatory methods diseases dimensions of personality goal directed behaviors and life stories These perspectives argue the authors underlie the principles and practice of all psychiatry With an understanding of these fundamental methods readers will be equipped to organize and evaluate psychiatric information and to develop a confident approach to practice and research

Psychiatry and Pedopsychiatry Ladislav Hosák, Michal Hrdlička, 2017-02-01 The textbook *Psychiatry and Pedopsychiatry* provides a comprehensive overview of psychiatry Unlike other textbooks it also focuses on pedopsychiatry which is very important in the context of this specialization gaining independence in the Czech Republic The book systematically covers mental disorders from the perspectives of their clinical record file epidemiology etiopathogenesis examination methods the course of illnesses and their treatment It also includes interesting topics which are not commonly treated in textbooks despite being crucial for clinical practice and important for students general knowledge such as psychiatry of somatic diseases and psychiatry of consultation social rehabilitation the structure of the discipline and a proposal for a needed reform urgent states in psychiatry The text also includes an important chapter on the structure of psychiatric care in the Czech Republic and on upcoming changes The treatment of mental patients should be gradually transferred from large psychiatric hospitals which are often far away from the patient's homes to their natural living and social environment The scholars also paid special attention to the chapter on various methods used in psychotherapy a discipline which has been competing poorly in clinical practice against the fast and cheap pharmacotherapy

Method In Madness Peter W. Halligan, John C. Marshall, 2013-11-12 In clinical neuropsychiatry case studies provide invaluable demonstrations of the range and types of unusual psychological states that can occur after brain damage In the pursuit of objectivity and scientific respectability however many academic reports of neuropsychiatric disorders appear cold contrived and impersonal The essence and character of the patient's experience and behaviour is easily obscured or even lost a fact that cannot help researchers therapists and other practitioners to relate their conceptual knowledge to the flesh and blood people they meet in their professional lives In practice much of the actual discourse of such patients has been ignored as unworthy of scientific interest This book describes real patients in a clear and jargon free way These cases should serve to reduce the discrepancy between the formal representations of psychiatric illness in the mainstream literature and the reality of people struggling to make sense of their own predicament in everyday life *The Testimony and Methods of Psychiatrists*

Kiesler,2017-09-29 To understand the process of psychotherapeutic change one must look for the answers in the psychotherapeutic process itself This process involves the exchange of communications between two or more participants and as a result of the exchange modifications in the personality and behavior of the patient are expected to occur But what is the nature of the therapeutic messages How do they produce changes in the patient What aspects of the messages are important for therapeutic change And if the therapeutic force is somehow encoded in the messages where shall we look for it

in sentence structure in emotional overtones in gestures and body movements The Process of Psychotherapy is divided into two major parts dealing respectively with method and with systems In Part I the author presents an analysis of psychotherapy process research from a communications perspective developing an incisive and detailed analysis of the methodological issues that confront researchers in this field and suggesting theoretical and empirical strategies for addressing these issues Part II provides the first exhaustive and detailed summary of extant psychotherapy process systems The author first deals with direct systems those procedures of content analysis or rating scales that have been developed to assess the exchanges between therapists and patients Seventeen major direct process systems are presented in detail and are summarized with ample citations to the literature The final section of the book offers an exhaustive listing and concise description of various indirect measures of psychotherapy process which do not assess the verbatim interview exchanges of the participants in therapy but rather assess the participants perceptions via self report or standard analogue procedures This book is a basic sophisticated and exhaustive coverage of psychotherapy process and content analysis that will become the standard and authoritative source for anyone interested in the process of psychotherapy whether as student researcher or practitioner
