Herbert Butterfield Kenneth B. McIntyre, 2023-10-03 The most original historian of his generation That is how the celebrated British academic Noel Annan described Herbert Butterfield 1900 1979 a profound and prolific writer who made important contributions as both a public and academic historian In this authoritative and accessible intellectual biography Kenneth B McIntyre explores the extraordinary range of Butterfield's work He shows why the small book *The Whig Interpretation of History* 1931 achieved such large influence Butterfield he demonstrates has profoundly shaped American and European historiography by highlighting the distortions that occur when historians interpret the past merely as steps along the way toward the glorious present But McIntyre delves much deeper examining everything from Butterfield's lectures on history historiography and Christianity to his warnings about the dangers of hubris in international affairs to his essays on the origins of modern science which basically created the modern discipline of the history of science This latest volume in the acclaimed Library of Modern Thinkers series helps us understand a prescient and insightful thinker who challenged dominant currents in history historiography international relations and politics

The Newtonian Revolution I. Bernard Cohen, 1980 This volume presents Professor Cohen's original interpretation of the revolution that marked the beginnings of modern science and set Newtonian science as the model for the highest level of achievement in other branches of science It shows that Newton developed a special kind of relation between abstract mathematical constructs and the physical systems that we observe in the world around us by means of experiment and critical observation The heart of the radical Newtonian style is the construction on the mind of a mathematical system that has some features in common with the physical world this system was then modified when the deductions and conclusions drawn from it are tested against the physical universe Using this system Newton was able to make his revolutionary innovations in celestial mechanics and ultimately create a new physics of central forces and the law of universal gravitation Building on his analysis of Newton's methodology Professor Cohen explores the fine structure of revolutionary change and scientific creativity in general This is done by developing the concept of scientific change as a series of transformations of existing ideas It is shown that such transformation is characteristic of many aspects of the sciences and that the concept of scientific change by transformation suggests a new way of examining the very nature of scientific creativity

The Vital Roots of European Enlightenment Samar Attar, 2007-10-23 The Vital Roots of European Enlightenment is a collection of essays which deal with the influence of Ibn Tufayl a 12th century Arab philosopher from Spain on major European thinkers His philosophical novel Hayy Ibn Yaqzan could be considered one of the most important books that heralded the Scientific Revolution Its thoughts are found in different variations and to different degrees in the books of Thomas Hobbes John Locke

Isaac Newton and Kant But if Ibn Tufayl's fundamental values such as equality freedom and toleration which the thinkers of the European Enlightenment had adopted as theirs paved the way to the French Revolution they certainly marked the end of the age of reason in southern Spain and the rest of the Islamic world Ibn Tufayl's philosophy was appropriated subverted or reinvented for many centuries But the memory of the man who wrote such an influential book was buried in the dust of history The Vital Roots of European Enlightenment reexamines Ibn Tufayl's momentous book and its continued influence over contemporary philosophy This intriguing book will appeal to those interested in comparative literature and religion

Rethinking the Scientific Revolution Margaret J. Osler, 2000-03-13 This book challenges the traditional historiography of the Scientific Revolution probably the single most important unifying concept in the history of science Usually referring to the period from Copernicus to Newton roughly 1500 to 1700 the Scientific Revolution is considered to be the central episode in the history of science the historical moment at which that unique way of looking at the world that we call modern science and its attendant institutions emerged It has been taken as the terminus a quo of all that followed Starting with a dialogue between Betty Jo Teeter Dobbs and Richard S Westfall whose understanding of the Scientific Revolution differed in important ways the papers in this volume reconsider canonical figures their areas of study and the formation of disciplinary boundaries during this seminal period of European intellectual history

The Death and Life of Speculative Theology Ryan Hemmer, 2023-07-25 The Death and Life of Speculative Theology argues that speculative theology can be decoupled from classicism transformed through modern science philosophy and culture and made useful for addressing intellectual problems in this cosmopolitan age Speculative theology can provoke organize regulate and invigorate intellectual pluralism and thereby contribute to making the world a home for the human spirit Drawing on the thought of Bernard Lonergan Ryan Hemmer narrates the rise and fall of speculative theology anticipates how it might be renewed and repurposes some of its forgotten achievements to show that modern theology can be a modern science for a modern culture The Life and Words of Christ, Revised Edition Cunningham Geike, 1900

Herbert Butterfield C.T. McIntire, 2008-10-01 Herbert Butterfield 1900 1979 was an important British historian and religious thinker whose ideas in particular his concept of a Whig interpretation of history remain deeply influential In this intellectual biography the first comprehensive study of Butterfield C T McIntire focuses on the creative processes that lay behind Butterfield's intellectual accomplishments Drawing on his investigations into Butterfield's vast and diverse output of

published and unpublished work McIntire explores Butterfield's ideas and methods. He describes Butterfield's lifelong devotion to his Methodist faith and shows how his Christian spirituality animated his historical work. He also traces the theme of dissent that ran through Butterfield's life and work, presenting a man who found himself at odds with prevailing convictions about history, morality, politics, religion, and teaching a man who elevated the notion of dissent into an ethic of living in tension with any established system. *Human Origins* Samuel Laing, 1892
