settlement patterns and changing ceramic distribution trade and use A large amount of primary data is presented covering an extensive area from Minab to Bushehr along the coast and inland as far as Sirjan This includes information on a number of previously undocumented archaeological sites as well as a detailed description and analysis of the ceramic finds which underpin the settlement evidence and provide a wider source of reference By collecting carefully controlled archaeological evidence related to the size distribution and period of occupation of urban and rural settlements distributed across southern Iran Williamson aimed to reconstruct the broader historical development of the region Due to his early death the work was never completed The key aims of the authors of this volume were to do justice to Williamson s remarkable vision and efforts on the one hand and at the same time to bring this important new evidence to ongoing discussions about the development of southern Iran through the Sasanian and Islamic periods Pre-Columbian Foodways John Staller, Michael

Is archaeology an art or a science This question has been hotly debated over the last few decades with the rise of archaeological science At the same time archaeologists have seen a change in the intellectual character of their discipline as many writers have adopted approaches influenced by social theory The discipline now encompasses both archaeological scientists and archaeological theorists and discussion regarding the status of archaeology remains polarised In this 2001 book Andrew Jones argues that we need to analyse the practice of archaeology Through an analysis of archaeological practice influenced by recent developments in the field of science studies and with the aid of extensive case studies he develops a new framework which allows the interpretative and methodological components of the discipline to work in tandem His reassessment of the status and character of archaeology will be of interest to students scholars and professionals

monograph presents the results of the excavation specialist analyses and provides a key dataset upon which to discuss regionally and nationally important later prehistoric research themes The excavations at Morley Hill and Lower Callerton offer two large scale new datasets to compare within the corpus of enclosed Iron Age settlement sites across the region allowing for an increased understanding of settlement patterns architectural forms and farming practices These include settlement development longevity and tempo the relationship between lowland and upland sites settlement organization and identity roundhouse architecture and the impact of contact with the Roman world At Morley Hill work revealed two later Iron Age settlements defined by rectilinear enclosures surrounding groups of roundhouses with evidence for earlier phases of activity The settlements at Morley Hill are comparable to many such distinctive settlements identified across the region and explored in recent years largely through developer funded excavations Lower Callerton represents a less explored form of extensive settlement with the excavation revealing evidence of earlier prehistoric activity overlain by a large Iron Age enclosure with over 53 structures multiple sub enclosures and boundaries Comprehensive Bayesian modeling at Lower Callerton has provided a robust chronological framework indicating complex and continual settlement development from the middle Iron Age The implications of this in terms of wider settlement development tempo and longevity are explored While the monograph focuses on the Iron Age the identification and influence of earlier prehistoric activity is also explored The discussion is again enhanced by the program of radiocarbon dating and isotopic analysis of cereal grains from Neolithic pits at Lower Callerton
