The Nature of War in the Information Age David J. Lonsdale, 2004-06-01 There has been a great deal of speculation recently concerning the likely impact of the Information Age on warfare In this vein much of the Revolution in Military Affairs RMA literature subscribes to the idea that the Information Age will witness a transformation in the very nature of war In this book David Lonsdale puts that notion to the test Using a range of contexts the book sets out to look at whether the classical Clausewitzian theory of the nature of war will retain its validity in this new age The analysis covers the character of the future battlespace the function of command and the much hyped concept of Strategic Information Warfare Finally the book broadens its perspective to examine the nature of Information Power and its implications for geopolitics Through an assessment of both historical and contemporary case studies including the events following September 11 and the recent war in Iraq the author concludes that although the future will see many changes to the conduct of warfare the nature of war as given theoretical form by Clausewitz will remain essentially unchanged **Electronic**

Cyberdeterrence and Cyberwar Martin C. Libicki, 2009 The protection of cyberspace the information medium has become a vital national interest because of its importance both to the economy and to military power An attacker may tamper with networks to steal information for the money or to disrupt operations Future wars are likely to be carried out in part or perhaps entirely in cyberspace It might therefore seem obvious that maneuvering in cyberspace is like maneuvering in other

media but nothing would be more misleading Cyberspace has its own laws for instance it is easy to hide identities and difficult to predict or even understand battle damage and attacks deplete themselves quickly Cyberwar is nothing so much as the manipulation of ambiguity The author explores these in detail and uses the results to address such issues as the pros and cons of counterattack the value of deterrence and vigilance and other actions the United States and the U S Air Force can take to protect itself in the face of deliberate cyberattack Publisher description [Disruptive Security Technologies with Mobile Code and Peer-to-Peer Networks](#) R.R. Brooks,2004-11-29 The traditional fortress mentality of system security has proven ineffective to attacks by disruptive technologies This is due largely to their reactive nature Disruptive security technologies on the other hand are proactive in their approach to attacks They allow systems to adapt to incoming threats removing many of the vulnerabilities explo

Technology and the Law on the Use of Force Jackson Maogoto, 2014-11-13 As governmental and non governmental operations become progressively supported by vast automated systems and electronic data flows attacks of government information infrastructure operations and processes pose a serious threat to economic and military interests In 2007 Estonia suffered a month long cyber assault to its digital infrastructure described in cyberspace as Web War I In 2010 a worm Stuxnet was identified as supervisory control and data acquisition systems at Iran s uranium enrichment plant presumably in an attempt to set back Iran s nuclear programme The dependence upon telecommunications and information infrastructures puts at risk Critical National Infrastructure and is now at the core of national security interests This book takes a detailed look at these new theatres of war and considers their relation to international law on the use of force Except in cases of self defence or with the authorisation of a Security Council Resolution the use of force is prohibited under the UN charter and customary international law However the law of jus ad bellum was developed in a pre digital era where current technological capabilities could not be conceived Jackson Maogoto asks whether the law on the use of force is able to deal with legal disputes likely to arise from modern warfare Key queries include how one defines an armed attack in an age of anti satellite weaponry whether the destruction of a State s vital digital eco system or the blinding of military communication satellites constitutes a threat and how one delimits the threshold that would enliven the right of self defence or retaliatory action The book argues that while technology has leapt ahead the legal framework has failed to adapt rendering States unable to legally defend themselves effectively The book will be of great interest and use to researchers and students of international law the law of armed conflict Information Technology and the law and counter terrorism

Globalisation and the New Terror David Martin Jones, 2004-01-28 Examines trends in new terror understood here to be the capacity of sub state actors to secure religious or politically motivated objectives by violent means Argues that while the use of violence to

achieve political ends is scarcely original what distinguishes new terror is its potential for lethality Australian author

Networks and Netwars John Arquilla, David Ronfeldt, 2001-11-05 Netwar like cyberwar describes a new spectrum of conflict that is emerging in the wake of the information revolution Netwar includes conflicts waged on the one hand by terrorists criminals gangs and ethnic extremists and by civil society activists such as cyber activists or WTO protestors on the other What distinguishes netwar is the networked organizational structure of its practitioners with many groups actually being leaderless and their quickness in coming together in swarming attacks To confront this new type of conflict it is crucial for governments military and law enforcement to begin networking themselves
