Security Dynamics Of Demographic Factors:

The Security Dynamics of Demographic Factors ,2000 This report presents a framework for understanding the implications of global demographic trends for international and U S national Security One of its goals is to spark discussion between demographers and national security analysts The document should be of interest to security analysts demographers foreign policymakers and general audiences interested in the implications of demographic trends for international security policy This research was jointly sponsored by the Population Matters project in RAND s Labor and Population Program and by the RAND Arroyo Center A principal goal of Population Matters is to inform both public and specialist audiences about the findings of demographic research and their implications for policy The Population Matters project is funded by grants from the William and Flora Hewlett Foundation the Rockefeller Foundation and the David and Lucile Packard Foundation The Arroyo Center is a federally funded research and development center sponsored by the United States Army This work inspired by prior research on alternative security futures conducted in the Strategy Doctrine and Resources Program of the Arroyo Center drew only from sources in the public domain The principal aim of this report is to provide a framework for understanding the influence of demographic factors on international security issues Specifically three major questions are addressed what current demographic trends pose international security concerns What are the security implications of these trends what are the implications for U S foreign defense and intelligence policies **Population Puzzle** Laura E.

Huggins,Hanna Skandera,2013-09-01 Drawing from government reports think tank studies scholarly journals magazines newspapers and books this insightful overview offers a range of contrasting viewpoints and policy perspectives on the major issues concerning world population growth with particular emphasis on the impact of population trends on the United States

Environmental Change and Security Project Report ,2002 **Germany's New Security Demographics** Wenke Apt,2013-12-04 Military recruitment will become more difficult in times of demographic aging The question arises whether demographic change will constrain the capacity of aging states like Germany to conduct foreign policy and pursue their national security interests Since contemporary military operations still display a strong human element particular scrutiny is given to the empirical analysis of the determinants of military propensity and military service among youth An additional human capital projection until 2030 illustrates how the decline in the youth population will interact with trends in educational attainment and adolescent health to further complicate military recruitment in the future A concluding review of recruiting practices in other NATO countries provides insight in best practice policy options to reduce the military s sensitivity to demographic change Following this approach the book gives prominence to a topic that has thus far been under represented in the greater discussion of demographic change today namely the demographic impact on international affairs and strategic calculations *The Security Demographic* Richard Paul Cincotta,Robert Engelman,Daniele Anastasion,2003 Do the dynamics of human population rates of growth age structure distribution and more influence when and where warfare

will next break out The findings of this report suggest that the risks of civil conflict deadly violence between governments and non state insurgents or between state factions within territorial boundaries that are generated by demographic factors may be much more significant than generally recognized and worthy of more serious consideration by national security policy makers and researchers Its conclusions drawn from a review of literature and analyses of data from 180 countries about half of which experienced civil conflict at some time from 1970 through 2000 argue that Recent progress along the demographic transition a population s shift from high to low rates of birth and death is associated with continuous declines in the vulnerability of nation states to civil conflict If this association continues through the 21st century then a range of policies promoting small healthy and better educated families and long lives among populations in developing countries seems likely to encourage greater political stability in weak states and to enhance global security in the future

Demographics and the Changing National Security Environment, 2000 Demographic factors seldom directly cause conflict between nations They can however exacerbate existing tensions and increase the risk of violent conflict Long term fertility trends urbanization migration and changes in the ethnic composition and age profile of populations can influence the likelihood and nature of conflict among and within nations Brian Nichiporuk explores these issues in *The Security Dynamics of Demographic Factors* seeking to answer three questions in particular First which demographic trends pose international security concerns Second what are the security implications of these trends Third what should the United States do% in response to these issues The future international security environment of course will be determined by complex interactions between geographical alignments technologic%al advances economic developments environmental trends and demographic factors This research does not address all these complex interactions but it does note the direction in which demographic factors can affect security issues

Dire Demographics Julie DaVanzo, Clifford Anthony Grammich, 2001 Presents a Rand study of population trends in the Russian Federation

Walking the Tightrope Jaïr van der Lijn, 2006 The media generally tend to focus in particular on the failures of U N peacekeeping operations In *Walking the Tightrope* Jaïr Van Der Lijn draws a different conclusion He argues once a peace agreement has been signed the efforts of the U N peacekeeping operations do contribute to durable peace By analyzing the U N peacekeeping operations in Cambodia Mozambique Rwanda and El Salvador in a structured focused comparison this book shows how U N operations do have a contribution to make

Asia's Aging Security Andrew L. Oros, 2025-09-09 Major demographic transitions are underway in Asia and the Pacific The populations of China Japan Taiwan South Korea and Russia are aging and shrinking while India the Philippines Vietnam and Australia among others continue to grow How will these striking changes affect regional security dynamics and the United States led alliance structure in the Indo Pacific Andrew L Oros offers an expert analysis of how rapid aging and population shifts are transforming the military strategies and capabilities of regional powers in Asia Examining sixteen states he provides a comparative view of the developing landscape and explores ways to address the consequences Oros demonstrates

that contrary to what many have claimed states with shrinking populations will continue to be formidable military powers He develops a novel theoretical and empirical argument for why rapid aging does not necessarily dampen security competition Nonetheless demographic shifts in the coming decades will fundamentally alter the security challenges facing the United States and its allies Oros considers how technological change and health care advances are mitigating the drawbacks of aging populations as well as how factors such as autonomous defense systems and artificial intelligence present new challenges Rigorous and timely Asia's Aging Security makes a forceful case that adjustment to demographic change is a necessity for twenty first century foreign policy *The Graying of the Great Powers* Richard Jackson, Neil Howe, 2008-05-23

Environmental Security Rita Floyd, Richard A. Matthew, 2013 Economic development population growth and poor resource management have combined to alter the planet's natural environment in dramatic and alarming ways For over twenty years considerable research and debate have focused on clarifying or disputing linkages between various forms of environmental change and various understandings of security At one extreme lie sceptics who contend that the linkages are weak or even non-existent they are simply attempts to harness the resources of the security arena to an environmental agenda At the other extreme lie those who believe that these linkages may be the most important drivers of security in the 21st century indeed the very future of humankind may be at stake This book brings together contributions from a range of disciplines to present a critical and comprehensive overview of the research and debate linking environmental factors to security It provides a framework for representing and understanding key areas of intellectual convergence and disagreement clarifying achievements of the research as well as identifying its weaknesses and gaps Part I explores the various ways environmental change and security have been linked and provides principal critiques of this linkage Part II explores the linkage through analysis of key issue areas such as climate change energy water food population and development Finally the book concludes with a discussion of the value of this subfield of security studies and with some ideas about the questions it might profitably address in the future This volume is the first to provide a comprehensive overview of the field With contributions from around the world it combines established and emerging scholars to offer a platform for the next wave of research and policy activity It is invaluable for both students and practitioners interested in international relations environment studies and human geography

presents an analysis that is both timely and relevant given those events This important paper represents the kind of original thinking that this Institute was designed in the hope of fostering The two authors each of whom is individually the winner of a previous INSS outstanding research award develop and test a systematic targeted and useful methodology for examining the non state political violence and its practitioner that the United States now faces Their analysis also is grounded in Central Asia a new but increasingly important region to United States military interest and presence The paper stands well on either of those legs a systematic methodology for violent non state actors or a detailed and security oriented examination of an emerging critical region Taken together the two legs mark it as a singularly significant work one well worthy of serious study
