Modern Statistics For The Life Sciences:

Modern Statistics for the Life Sciences Wageningen UR.,2008 **Modern Statistics for the Life Sciences** Alan Grafen,Rosemary Hails,2002-03-21 Model formulae represent a powerful methodology for describing discussing understanding and performing that large part of statistical tests known as linear statistics The book aims to put this methodology firmly within the grasp of undergraduates **Statistics for the Life Sciences** Myra L. Samuels,Jeffrey A. Witmer,Andrew A. Schaffner,2016 The Fifth Edition of Statistics for the Life Sciences uses authentic examples and exercises from a wide variety of life science domains to give statistical concepts personal relevance enabling students to connect concepts with situations they will encounter outside the classroom The emphasis on understanding ideas rather than memorizing formulas makes the text ideal for students studying a variety of scientific fields animal science agronomy biology forestry health medicine nutrition pharmacy physical education zoology and more In the fifth edition randomization tests have been moved to the fore to motivate the inference procedures introduced in the text There are no prerequisites for the text except elementary algebra Statistical Rethinking Richard McElreath,2018-01-03 Statistical Rethinking A Bayesian Course with Examples in R and Stan builds readers knowledge of and confidence in statistical modeling Reflecting the need for even minor programming in today s model based statistics the book pushes readers to perform step by step calculations that are usually automated This unique computational approach ensures that readers understand enough of the details to make reasonable choices and interpretations in their own modeling work The text presents generalized linear multilevel models from a Bayesian perspective relying on a simple logical interpretation of Bayesian probability and maximum entropy It covers from the basics of regression to multilevel models The author also discusses measurement error missing data and Gaussian process models for spatial and network autocorrelation By using complete R code examples throughout this book provides a practical foundation for performing statistical inference Designed for both PhD students and seasoned professionals in the natural and social sciences it prepares them for more advanced or specialized statistical modeling Web Resource The book is accompanied by an R package rethinking that is available on the author s website and GitHub The two core functions map and map2stan of this package allow a variety of statistical models to be constructed from standard model formulas Fundamental Statistical Concepts and Techniques in the Biological and Environmental Sciences A. Bradley Duthie,2024-10-08 Fundamental Statistical Concepts and Techniques in the Biological and Environmental Sciences With jamovi is an introductory textbook for learning statistics It starts with the very basics and prioritises helping the reader to develop a conceptual understanding of statistics and apply the most fundamental statistical tools New concepts are introduced with examples designed to be familiar to the reader serving as a useful starting point for exploring more abstract concepts Key Features Designed to be accessible for students learning statistics in biological and environmental sciences Utilizes the statistical software jamovi to explore new concepts Prioritizes good statistical judgement over adherence to

Biomeasurement Dawn Hawkins,2014-04 Offering a student focused introduction to the use of statistics in the study of the biosciences this text looks at statistical techniques and other essential tools for bioscientists giving students the confidence to use and further explore the key techniques for themselves **Using the Biological Literature** Diane Schmidt,2014-04-14 The biological sciences cover a broad array of literature types from younger fields like molecular biology with its reliance on recent journal articles genomic databases and protocol manuals to classic fields such as taxonomy with its scattered literature found in monographs and journals from the past three centuries Using the Biological Literature A Practical Guide Fourth Edition is an annotated guide to selected resources in the biological sciences presenting a wide ranging list of important sources This completely revised edition contains numerous new resources and descriptions of all entries including textbooks The guide emphasizes current materials in the English language and includes retrospective references for historical perspective and to provide access to the taxonomic literature It covers both print and electronic resources including monographs journals databases indexes and abstracting tools websites and associations providing users with listings of authoritative informational resources of both classical and recently published works With chapters devoted to each of the main fields in the basic biological sciences this book offers a guide to the best and most up to date resources in biology It is appropriate for anyone interested in searching the biological literature from undergraduate students to faculty researchers and librarians The guide includes a supplementary website dedicated to keeping URLs of electronic and web based resources up to date a popular feature continued from the third edition **The Theoretical Biologist's Toolbox** Marc Mangel,2006-07-27 Mathematical modelling is widely used in ecology and evolutionary biology and it is a topic that many biologists find difficult to grasp In this new textbook Marc Mangel provides a no nonsense introduction to the skills needed to understand the principles of theoretical and mathematical biology Fundamental theories and applications are introduced using numerous examples from current biological research complete with illustrations to highlight key points Exercises are also included throughout the text to show how theory can be applied and to test knowledge gained so far Suitable for advanced undergraduate courses in theoretical and mathematical biology this book forms an essential resource for anyone wanting to gain an understanding of theoretical ecology and evolution **Social Evolution and Inclusive Fitness Theory** James A.R. Marshall,2019-01-08 Social behavior has long puzzled evolutionary biologists since the classical theory of natural selection maintains that individuals should not sacrifice their own fitness to affect that of others Social Evolution and Inclusive Fitness Theory argues that a theory first presented in 1963 by William D Hamilton inclusive fitness

theory provides the most fundamental and general explanation for the evolution and maintenance of social behavior in the natural world James Marshall guides readers through the vast and confusing literature on the evolution of social behavior introducing and explaining the competing theories that claim to provide answers to questions such as why animals evolve to behave altruistically Using simple statistical language and techniques that practicing biologists will be familiar with he provides a comprehensive yet easily understandable treatment of key concepts and their repeated misinterpretations Particular attention is paid to how more realistic features of behavior such as nonadditivity and conditionality can complicate analysis Marshall highlights the general problem of identifying the underlying causes of evolutionary change and proposes fruitful approaches to doing so in the study of social evolution Social Evolution and Inclusive Fitness Theory describes how inclusive fitness theory addresses both simple and complex social scenarios the controversies surrounding the theory and how experimental work supports the theory as the most powerful explanation for social behavior and its evolution Special Issue: Age and Growth of Chondrichthyan Fishes: New Methods, Techniques and Analysis John K. Carlson,Kenneth J. Goldman,2007-04-05 This volume offers a collection of papers on the quantitative assessment of age and growth in Chondrichthyan fishes It details new hard parts for assessments of age such as caudal thorns new techniques like bomb radiocarbon for validation and reexaminations of previous age and growth models It also examines the importance of assessing the precision and accuracy of statistical formulas analyses and models used in age and growth studies
