Allen, 2010-02-15 Though we have other distinguishing characteristics bipedalism, relative hairlessness etc, the brain and the behavior it produces are what truly set us apart from the other apes and primates. How this three pound organ composed of water, fat and protein turned a mammal species into the dominant animal on earth is the story Allen tells. *Charney and Nestler's Neurobiology of Mental Illness* Dennis Charney, Eric Nestler, Joseph D. Buxbaum, Elisabeth B. Binder, Joshua A. Gordon, Marina R. Picciotto, 2025-01-03 The genetic investigation into mental illnesses has progressed rapidly since the mapping of the human genome. Driven by advances in genomic profiling technology, massive genomic datasets are powering the discovery of genetic variation associated to complex traits including mental illness. From severe neurodevelopmental disorders to schizophrenia and depression, genetic variation plays some role in risk. Critically, most mental illnesses are complex, multifactorial, and the consequence of a combination of genetic and environmental influences. This chapter will introduce the genome, its variation, and the methods used to identify what variants and genes matter for mental illnesses. *Biomedical Index to PHS-supported Research*, 1993 *Handbook of Research on Critical Examinations of Neurodegenerative Disorders* Uddin, Md. Sahab, Amran, Md. Shah, 2018-07-31 Neurodegeneration is a key feature of several diseases that are referred to as neurodegenerative diseases. The process of neurodegeneration is not well understood, so the diseases that stem from it have as yet no cures. As such, studying the effects of these disorders can provide insight into the treatment, prevention, and future opportunities and challenges in this growing field. The *Handbook of Research on Critical Examinations of Neurodegenerative Disorders* is a critical scholarly resource that provides an extensive explanation of various neurodegenerative disorders based on existing studies to clarify etiology, pathological mechanisms, diagnosis, therapeutic interventions, as well as current status and future opportunities and challenges. Featuring coverage on a broad range of topics such as dementia, mitochondrial dysfunction, and risk factors, this book is geared towards neurobiologists, neuropsychologists, neurophysiologists, neuropathologists, medical professionals, academicians, and researchers seeking research on the complexity of neurodegenerative disorders. **Research Awards Index**, 1989 *Current Catalog*, 1988 First multi year cumulation
