Piagets Conception Of Evolution Beyond Darwin And Lamarck:

Piaget's Conception of Evolution John Gerard Messerly, 1996 The first full length study of Jean Piaget as a philosopher and evolutionist Messerly traces Piaget s earliest conjectures about knowledge through its further developments to its mature formulation as genetic epistemology Messerly analyzes Piaget s constructivist theory of the evolution of human knowledge as continuous with yet partially transcending the biological process of adaptation to the environment Messerly s study serves as an invitation to further explorations with Piaget s theory and will interest philosophers biologists and psychologists

The Cambridge Companion to Piaget Ulrich Müller, Jeremy I. M. Carpendale, Leslie Smith, 2009-08-24 Jean Piaget 1896 1980 was listed among the 100 most important persons in the twentieth century by Time magazine and his work with its distinctive account of human development has had a tremendous influence on a range of disciplines from philosophy to education and notably in developmental psychology The Cambridge Companion to Piaget provides a comprehensive introduction to different aspects of Piaget s work in a manner that does not eschew engagement with the complexities of subjects or debates yet is accessible to upper level undergraduate students Each chapter is a specially commissioned essay written by an expert on the subject matter Thus the book will also be of interest to academic psychologists educational psychologists and philosophers

Creativity and Development R. Keith Sawyer, Vera John-Steiner, Seana Moran, Robert J. Sternberg, David Henry Feldman, Howard Gardner, Jeanne Nakamura, Mihaly Csikszentmihalyi, 2003-09-04 What is creativity and where does it come from Creativity and Development explores the fascinating connections and tensions between creativity research and developmental psychology two fields that have largely progressed independently of each other until now In this book scholars influential in both fields explore the emergence of new ideas and the development of the people and situations that bring them to fruition The uniquely collaborative nature of Oxford s Counterpoints series allows them to engage in a dialogue addressing the key issues and potential benefits of exploring the connections between creativity and development Creativity and Development is based on the observation that both creativity and development are processes that occur in complex systems in which later stages or changes emerge from the prior state of the system In the 1970s and 1980s creativity researchers shifted their focus from personality traits to cognitive and social processes and the co authors of this volume are some of the most influential figures in this shift The central focus on system processes results in three related volume themes how the outcomes of creativity and development emerge from dynamical processes the interrelation between individual processes and social processes and the role of mediating artifacts and domains in developmental and creative processes The chapters touch on a wide range of important topics with the authors drawing on their decades of research into creativity and development Readers will learn about the creativity of children s play the creative aspects of children s thinking the creative processes of scientists the role of education and teaching in creative development and the role of multiple intelligences in both creativity and development The

final chapter is an important dialogue between the authors who engage in a roundtable discussion and explore key questions facing contemporary researchers such as Does society suppress children s creativity Are creativity and development specific to an intelligence or a domain What role do social and cultural contexts play in creativity and development Creativity and Development presents a powerful argument that both creativity scholars and developmental psychologists will benefit by becoming more familiar with each other s work

Evolution Peter J. Bowler, 2009-09-08 Since its original publication in 1989 *Evolution The History of an Idea* has been recognized as a comprehensive and authoritative source on the development and impact of this most controversial of scientific theories This twentieth anniversary edition is updated with a new preface examining recent scholarship and trends within the study of evolution

RENEWAL TRAVIS GIBBS, 2004-08-16 How often do we look up from the rubble of our expectations and in exasperation ask Why Imagine the cosmos grinning back and replying Well you tell me why Written at times caustically at times perplexedly and at times insightfully *Renewal* is set in the episodic context of personal upheaval mixed with wonder about the nature of love loss and relationships At its heart *Renewal* is about how we tend to afflict our awareness through our expectations and how we might meet the challenge to become unencumbered and renew our essential wonder and grace Welcome to the ride

Evolution and Learning Bruce H. Weber, David J. Depew, 2003 Essays on the contributions to historical and contemporary evolutionary theory of the Baldwin effect which postulates the effects of learned behaviors on evolutionary change

A Cultural-Historical Perspective on Mathematics Teaching and Learning Wolff-Michael Roth, Luis Radford, 2011-11-22 Eighty years ago L S Vygotsky complained that psychology was misled in studying thought independent of emotion This situation has not significantly changed as most learning scientists continue to study cognition independent of emotion In this book the authors use cultural historical activity theory as a perspective to investigate cognition emotion learning and teaching in mathematics Drawing on data from a longitudinal research program about the teaching and learning of algebra in elementary schools Roth and Radford show a how emotions are reproduced and transformed in and through activity and b that in assessments of students about their progress in the activity cognitive and emotional dimensions cannot be separated Three features are salient in the analyses a the irreducible connection between emotion and cognition mediates teacher student interactions b the zone of proximal development is itself a historical and cultural emergent product of joint teacher students activity and c as an outcome of joint activity the object motive of activity emerges as the real outcome of the learning activity The authors use these results to propose a a different conceptualization of the zone of proximal development b activity theory as an alternative to learning as individual social construction and c a way of understanding the material ideal nature of objects in activity Wolff Michael Roth is Lansdowne Professor at the University of Victoria Canada He researches scientific and mathematical cognition along the life span from cultural historical and phenomenological perspectives He has conducted research in science and mathematics classrooms as well as having realized multi year ethnographic studies of science and

mathematics in workplaces and scientific research Luis Radford is full professor at Laurentian University in Canada His research interests include the investigation of mathematics thinking and knowing from a cultural semiotic embodied perspective and the historical and cultural roots of cognition For many years he has been conducting classroom research with primary and high school teachers about the teaching and learning of mathematics The History and Evolution of Psychology Brian D. Cox, 2019-07-15 This book discusses key figures in history in the context of their time takes students on a carefully formulated chronological journey through the build up of psychology from ancient times to the present and seeks to draw students into the way science is done rather than merely presenting them with historical fact Students will learn not only the what but the why of the history of psychology and will acquire the necessary background historical material to fully understand those concepts Organized around a series of paradigms a shift from scholasticism to rationalism or empiricism and a shift from idealism to materialism the book seeks to portray psychology as an on going evolving process rather than a theory **The Oxford Handbook of Entrepreneurial Finance** Douglas Cumming, 2012-03-22 Provides a comprehensive picture of issues dealing with different sources of entrepreneurial finance and different issues with financing entrepreneurs The Handbook comprises contributions from 48 authors based in 12 different countries *Towards Discursive Education* Christina E. Erneling, 2010-09-16 As technology continues to advance the use of computers and the Internet in educational environments has immensely increased But just how effective has their use been in enhancing children s learning In this thought provoking book Christina E Erneling conducts a thorough investigation of scholarly journal articles on how computers and the Internet affect learning She critiques the influential pedagogical theories informing the use of computers in schools in particular those of Jean Piaget and theory of mind psychology Erneling introduces and argues for a discursive approach to learning based on the philosophy of Ludwig Wittgenstein and the psychology of Lev Vygotsky This book not only addresses an urgent pedagogical problem in depth but also challenges dominant assumptions about learning in both developmental psychology and cognitive science **Handbook of Research On Entrepreneurship** Alain Fayolle, 2014-05-30 This indispensable Handbook offers a fresh look at entrepreneurship research addressing what we already know and what we still need to know in the field Over the course of 17 chapters a collaboration of 24 highly regarded researchers expe **Scientific Pollyannaism** Oksana Yakushko, 2019-06-24 This book argues that the story of the orphan girl Pollyanna namely her strategy of playing the glad games to manage loss abuse and social prejudice serves as a framework for critiquing historical forms of Western scientific Pollyannaism The author examines Pollyannaism as it relates to the sciences demonstrating how the approach has been used throughout modern Western history to enforce happiness and to criticize negative human emotional states These efforts carried out by scientists and popularized as scientific focus on negating the role of the environment and on promoting varied forms of emotional control Ultimately the book emphasizes strategies used to compel individuals into becoming Pollyannas about science itself Anthropology of Color Robert E.

MacLaury, Galina V. Paramei, Don Dedrick, 2007-11-21 The field of color categorization has always been intrinsically multi and inter disciplinary since its beginnings in the nineteenth century The main contribution of this book is to foster a new level of integration among different approaches to the anthropological study of color The editors have put great effort into bringing together research from anthropology linguistics psychology semiotics and a variety of other fields by promoting the exploration of the different but interacting and complementary ways in which these various perspectives model the domain of color experience By so doing they significantly promote the emergence of a coherent field of the anthropology of color As of February 2018 this e book is freely available thanks to the support of libraries working with Knowledge Unlatched

Biology and Knowledge Revisited Sue Taylor Parker, Jonas Langer, Constance Milbrath, 2014-04-04 Based on the Annual Symposium of the Jean Piaget Society Biology and Knowledge Revisited focuses on the classic issue of the relationship between nature and nurture in cognitive and linguistic development and their neurological substrates Contributors trace the history of ideas concerning the relationship between evolution and development and bring powerful new conceptual systems and research data to bear on understanding the problem of experience contingent brain development and evolution They focus on processes of phenotype construction which fill the gap between genes and behavior and demonstrate that evolutionary psychological models of innate mental modules are incompatible with what is known about these processes This book presents exciting new approaches to the development and evolution of cognitive and linguistic abilities Returning to the broad evolutionary theme of a previous meeting the symposium focused on specifically constructivist approaches to neurogenesis and language acquisition and their evolution It was organized around ideas about the relationship between development and evolution raised in Piaget's books Research in this arena has yielded cutting edge insight into behavioral influences on brain plasticity Two of its subthemes run throughout a critique of modularity models popular among evolutionary psychologists and the prescient yet flawed nature of Piaget's critique of the modern synthesis of evolution As a result Biology and Knowledge Revisited is intended for developmental psychologists psycholinguists biological anthropologists evolutionary psychologists and philosophers of science

Bios: A Study Of Creation (With Cd-rom) Hector Sabelli, 2005-03-03 This book focuses on a prototype of creative causal processes termed BIOS and how the concept can be applied to the physical world in medicine and in social science This book presents methods for identifying creative features in empirical data studies showing biotic patterns in physical biological and economic processes mathematical models of bipolar positive and negative feedback that generate biotic patterns These studies support the hypothesis that natural processes are creative not determined and causal not random and that bipolar feedback plays a major role in their evolution Simple processes precede coexist constitute and surround the complex systems they generate priority of the simple In turn complex processes feedback and transform simpler ones supremacy of the complex
