Marzano,Guido Visconti,2003-01-31 This book is a collection of the lectures held at the International Summer School ISSAOS 2000 in L Aquila Italy given by invited lecturers coming from both Europe and the USA The goal of the book is to provide a broad panorama of spaceborne remote sensing techniques at both microwave and visible infrared bands and by both active and passive sensors for the retrieval of atmospheric and oceanic parameters A significant emphasis is given to the physical modeling background instrument potential and limitations inversion methods and applications Topics on international remote sensing programs and assimilation techniques into numerical weather forecast models are also touched The main purpose of the book is to offer to young scientists Ph D or equivalent students and to all who would like to have a broad spectrum understanding of spaceborne remote sensing capabilities introductory material to each remote sensing topic written by the most qualified experts in the field *Polar Remote Sensing* Dan Lubin,Robert Massom,2006-08-31 The polar regions perhaps more than any other places on Earth give the geophysical scientist a sense of exploration This sensibility is genuine for not only is high latitude eldwork arduous with many locations seldom or never visited but there remains much fundamental knowledge yet to be discovered about how the polar regions interact with the global climate system The range of opportunities for new discovery becomes strikingly clear when we realize that the high latitudes are not one region but are really two vastly di erent worlds The high Arctic is a frozen ocean surrounded by land and is home to fragile ecosystems and unique modes of human habitation The Antarctic is a frozen continent without regular human habitation covered by ice sheets taller than many mountain ranges and surrounded by the Earth s most forbidding ocean When we consider global change as applied to the Arctic we discuss impacts to a region whose surface and lower atmospheric temperatures are near the triple point of water throughout much of the year The most consistent signatures of climate warming have occurred at northern high latitudes IPCC 2001 and the potential impacts of a few degrees increase in surface temperature include a

reduction in sea ice extent a positive feedback to climate warming due to lowering of surface albedo and changes to surface runoff that might affect the Arctic Ocean's salinity and circulation

Introduction to Satellite Remote Sensing William Emery, Adriano Camps, 2017-08-30 Introduction to Satellite Remote Sensing Atmosphere Ocean and Land Applications is the first reference book to cover ocean applications atmospheric applications and land applications of remote sensing Applications of remote sensing data are finding increasing application in fields as diverse as wildlife ecology and coastal recreation management The technology engages electromagnetic sensors to measure and monitor changes in the earth's surface and atmosphere The book opens with an introduction to the history of remote sensing starting from when the phrase was first coined It goes on to discuss the basic concepts of the various systems including atmospheric and ocean then closes with a detailed section on land applications Due to the cross disciplinary nature of the authors experience and the content covered this is a must have reference book for all practitioners and students requiring an introduction to the field of remote sensing Provides study questions at the end of each chapter to aid learning Covers all satellite remote sensing technologies allowing readers to use the text as instructional material Includes the most recent technologies and their applications allowing the reader to stay up to date Delves into laser sensing LIDAR and commercial satellites DigitalGlobe Presents examples of specific satellite missions including those in which new technology has been introduced
