It is our pleasure to present the papers accepted for the 22nd International Workshop on Languages and Compilers for Parallel Computing held during October 8-10 2009 in Newark Delaware USA Since 1986 LCPC has become a valuable venue for researchers to report on work in the general area of parallel computing high performance computer architecture and compilers LCPC 2009 continued this tradition and in particular extended the area of interest to new parallel computing accelerators such as the IBM Cell Processor and Graphic Processing Unit GPU This year we received 52 submissions from 15 countries Each submission received at least three reviews and most had four The PC also sought additional external reviews for contentious papers The PC held an all day phone conference on August 24 to discuss the papers PC members

who had a conflict of interest were asked to leave the call temporarily when the corresponding papers were discussed From the 52 submissions the PC selected 25 full papers and 5 short papers to be included in the workshop proceedings representing a 58% acceptance rate We were fortunate to have three keynote speeches a panel discussion and a tutorial in this year's workshop First Thomas Sterling Professor of Computer Science at Louisiana State University gave a keynote talk titled HPC in Phase Change Towards a New Parallel Execution Model Sterling argued that a new multi dimensional research thrust was required to realize the design goals with regard to power complexity clock rate and reliability in the new parallel computer systems ParalleX an exploratory execution model developed by Sterling's group was introduced to guide the co design of new architectures programming methods and system software

Scheduling and Automatic Parallelization Alain Darte, Yves. Robert, Frederic Vivien, 2000-03-30 Readership This book is devoted to the study of compiler transformations that are needed to expose the parallelism hidden in a program This book is not an introductory book to parallel processing nor is it an introductory book to parallelizing compilers We assume that readers are familiar with the books High Performance Compilers for Parallel Computing by Wolfe 121 and Super compilers for Parallel and Vector Computers by Zima and Chapman 125 and that they want to know more about scheduling transformations In this book we describe both task graph scheduling and loop nest scheduling Task graph scheduling aims at executing tasks linked by precedence constraints it is a run time activity Loop nest scheduling aims at executing statement instances linked by data dependences it is a compile time activity We are mostly interested in loop nest scheduling but we also deal with task graph scheduling for two main reasons i Beautiful algorithms and heuristics have been reported in the literature recently and ii Several graph scheduling like list scheduling are the basis techniques used in task of the loop transformations implemented in loop nest scheduling As for loop nest scheduling our goal is to capture in a single place the fantastic developments of the last decade or so Dozens of loop transformations have been introduced loop interchange skewing fusion distribution etc before a unifying theory emerged The theory builds upon the pioneering papers of Karp Miller and Winograd 65 and of Lamport 75 and it relies on sophisticated mathematical tools unimodular transformations parametric integer linear programming Hermite decomposition Smith decomposition etc
