Porter,1998-01-01 Dialogue in science is essential for progress But when dialogue becomes conflict or further intensifies to persecution the situation is harmful not only to science but also to the wider society in which science exists This is true whether the conflict is internal in the case of Boltzmann or external as with Galileo and Oppenheimer against the **Cultures, Communities, and Conflict** Euthalia Lisa Panayotidis,Paul James

Redish,Matilde Vicentini,Società italiana di fisica,2004 Physics Education research is a

young field with a strong tradition in many countries. However, it has only recently received full recognition of its specificity and relevance for the growth and improvement of the culture of Physics in contemporary Society for different levels and populations. This may be due on one side to the fact that teaching therefore education is part of the job of university researchers and it has often been implicitly assumed that the competences required for good research activity also guarantee good teaching practice. On the other side and perhaps more important is the fact that the problems to be afforded in doing research in education are complex problems that require a knowledge base not restricted to the disciplinary physics knowledge but enlarged to include cognitive science, communication science, history and philosophy. The topics discussed here look at some of the facets of the problem by considering the interplay of the development of cognitive models for learning Physics with some reflections on the Physics contents for contemporary and future society with the analysis of teaching strategies and the role of experiments, the issue of assessment.

General Relativity Conflict and Rivalries Galina Weinstein, 2015. This book focuses on Albert Einstein and his interactions with and responses to various scientists, both famous and lesser known. It takes as its starting point that the discussions between Einstein and other scientists all represented a contribution to the edifice of general relativity and relativistic cosmology. These scientists, with whom Einstein implicitly or explicitly interacted, form a complicated web of collaboration which this study explores, focusing on their implicit and explicit responses to Einstein's work. This analysis uncovers latent undercurrents indiscernible to other approaches to tracking the intellectual pathway of Einstein to his general theory of relativity. The interconnections and interactions presented here reveal the central figures who influenced Einstein during this intellectual period. Despite current approaches to history presupposing that the efforts of scientists such as Max Abraham and Gunnar Nordström, which differed from Einstein's own views, be relegated to the background, this book shows that they all had an impact on the development of Einstein's theories, stressing the limits of approaches focusing solely on Einstein. As such, General Relativity Conflict and Rivalries proves that the general theory of relativity was not developed as a single coherent construction by an isolated brooding individual but rather that it came to fruition through Einstein's conflicts and interactions with other scientists and was consolidated by his creative processes during these exchanges.
