Its chapters cover all types of rebreathers currently available, the history, physics, physiology, and theory of rebreather diving, pre-dive, dive, and post-dive procedures, and maintenance and travel considerations. It is designed for use as a generic textbook for all agencies and rebreathers. *Mastering Rebreathers, Second Edition* is the perfect tool for those who would like to experience the thrill and excitement of expanding their diving skills and reinvigorating their passion for diving. In well-trained and well-informed hands, a rebreather will not only enhance the capabilities and enjoyment of diving but will increase safety as well. Whether you are new to rebreathers and are using this book as part of a formal training course, if you've been diving with rebreathers for years and have bought this book to add to your library, or even if you are just curious to learn more about this exciting form of underwater life, support you will find enormous value in the meticulously updated *Mastering Rebreathers*.

Decompression — Decompression Sickness A. A. Bühlmann, 2013-06-29 The Laboratory of Hyperbaric Physiology of the Medical Clinic of the University of Zurich came into existence in 1960 thanks to private initiative and a readiness to undertake risks; the successful start was made possible with help from the French Navy and the United States Navy. A prerequisite for the development of the laboratory was also the benevolence of the authorities of the University of Zurich toward a research project from which scarcely any practical use could be expected for the landlocked country of Switzerland. The development of the laboratory and the systematic research were supported generously from 1964 by Shell Internationale Petroleum Maatschappij of The Hague. The basic theme of the research was always the well-being and functional ability of the human being in an atmosphere of abnormal pressure and/or abnormal composition. Many connections became obvious with respiratory physiology, circulatory physiology, and physiology at great heights, and close contact with other special laboratories of the Medical Clinic proved very valuable. With a relatively small number of steady collaborators, it was possible to master an extensive experimental program. Special thanks are due to Mr Benno Schenk, who as technical head was responsible for the exact performance of all the hyperbaric experiments.
