connection to the technology of digital computing Unfortunately interdisciplinary studies of digital practices digital methods or digital humanities have rarely been informed by deep engagement with the history of computing Contributors to this volume have come together to reexamine an apparently familiar era in the history of computing through new lenses exploring early digital computing and engineering practice as digital phenomena rather than as engines of mathematics and logic Most focus on the period 1945 to 1960 the era in which the first electronic digital computers were created and the computer industry began to develop Because digitality is first and foremost a way of reading objects and encoding information within them we are foregrounding topics that have until now been viewed as peripheral in the history of computing betting odds calculators card file systems program and data storage programmable calculators and digital circuit design practices Reconceptualizing the history of computing as study of the early digital decenters the stored program computer repositioning it as one of many digital technologies

Islam and the Politics of Culture in Europe Frank Peter, Sarah Dornhof, Elena Arigita, 2014-03-15 Culture is a constant reference in debates surrounding Islam in Europe Yet the notion of culture is commonly restricted to conceptual frames of multiculturalism where it relates to group
