Remote Sensing and Geographical Information Systems for Resource Management in Developing Countries Alan S. Belward, Carlos R. Valenzuela, 2010-12-15 There is a growing realization that our expanding population and thirst for industrial and technological development directly threaten our environment This awareness has emerged as the nations of the world have developed a global outlook the earth was seen and photographed as a whole for the first time during the Apollo missions of the late 1960s also there is increasing recognition that the earth functions as a single system in which every living organism interacts with every other and that ecological processes do not recognize geographical boundaries At the same time however concern with our environment must be balanced against the need to provide food housing health care education and

employment for the growing populace This conflict can only be resolved through careful management of the earth's resources Management of natural resources implies knowledge regarding their state distribution and dynamics This in turn implies the active collection and recording of environmental data In fact such data have been collected throughout history From the earliest civilizations inventories through field surveys have been made concerning the spatial organization of the environment These have then been translated through the process of cartography into maps maps for navigation for military use for agriculturalists maps of a general nature such as topographic maps and thematic maps showing more specific themes such as land use Satellite Remote Sensing for Resources Development 3Island Press,1986-03-01 **The SAGE**

P. Obi Reddy,S. K. Singh,2018-09-11 This book offers an overview of geospatial technologies in land resources mapping monitoring and management It consists of four main sections geospatial technologies principles and applications geospatial technologies in land resources mapping geospatial technologies in land resources monitoring and geospatial technologies in land resources management Each part is divided into detailed chapters that include illustrations and tables The authors from leading institutes such as the ICAR NBSS LUP IIT B NRSC ICRISAT share their experiences and offer case studies to provide advanced insights into the field It is a valuable resource for the scientific and the teaching
