O'Gara,2011-04-20 The Wind River runs from the alpine lakes of the Continental Divide through the nestled valleys of the northern Rocky Mountains and out onto high windblown plains More than a century ago in what would become Wyoming the federal government set aside 44 million acres on which to confine the unrelated Shoshone and Arapaho tribes By now the Wind River Reservation has been reduced to 2 3 million acres but the battle over control of this land and especially the river that runs through it is far from over In this magnificent watershed Geoffrey O Gara a touching wise and penetrating writer

according to Edward Hoagland sets a remarkable story that illuminates the larger unfinished struggle for the heart of the West. He ranges from the Indian wars to the present day and from the nineteenth century Shoshone chief Washakie to his great grandson now head of the tribal council and he also traces the complex legal struggle over water rights for generations monopolized by white farmers for irrigation that after two decades is still unresolved. At the heart of O Gara's account are the citizens of Wind River itself, the people on the various sides of the many complex conflicts, the tragedy and resilience of the nine thousand Shoshone and Arapaho contending with the depredations of reservation life and the indifference of those who first took their land and have gradually assumed control of their water. In all this is a powerful moving story of great relevance and guarded promise of nations with different languages, cultures and birthrights still searching for a way to live together.

Looking Through Water (Revised Edition) Bob Rich, 2024-09-24. A father and son long estranged fight to win a fishing competition together and lose the pain that's kept them apart. It's 1976 and William McKay is at the top of his game. He's taken over the family brokerage firm. He has a stunning and accomplished fiancée. The NYC Chamber of Commerce has named him the Under 40 Executive of the Year. And yet William knows something is missing. Then he receives a phone call from his father who disappeared eleven years earlier while William's mother was dying from Alzheimer's. Leo's living in the Florida Keys now and he wants William to join him in a father-son fishing competition. Stunned by this father's audacity, suspicious of his motives but even more desperate to leave New York, William agrees and heads south in his private jet. The basis for the forthcoming film *Looking Through Water* chronicles the indelible impact that long festering pain can have on a family and the healing that comes with forgiveness once we learn when to reel in a big catch and when to let it all go.

In Quest of Indian Folktales Sadhana Naithani, 2006-05-21. A rare piece of scholarly detective work. Margaret Mills, Ohio State University. *In Quest of Indian Folktales* publishes for the first time a collection of northern Indian folktales from the late 19th century. Reputedly the work of William Crooke, a well-known folklorist and British colonial official, the tales were actually collected, selected, and translated by a certain Pandit Ram Gharib Chaube. In 1996 Sadhana Naithani discovered this unpublished collection in the archive of the Folklore Society, London. Since then she has uncovered the identity of the mysterious Chaube and the details of his collaboration with the famous folklorist. In an extensive four-chapter introduction, Naithani describes Chaube's relationship to Crooke and the essential role he played in Crooke's work as both a native informant and a trained scholar. By unearthing the fragmented story of Chaube's life, Naithani gives voice to a new identity of an Indian folklore scholar in colonial India. The publication of these tales and the discovery of Chaube's role in their collection reveal the complexity of the colonial intellectual world and problematize our own views of folklore in a postcolonial world.

The Practical Angler. By Piscator Edmund Goldsmid, 1842. Water and the Search for Life on Mars David M. Harland, 2007-09-24. Mars has long been believed to have been cold, dead, and dry for aeons, but there is now striking new proof that not only was Mars a relatively warm and wet place in geologically recent times but that even today there are vast

reserves of water frozen beneath the planet's surface. As well as casting fascinating new insights into Mars' past, this discovery is also forcing a complete rethink about the mechanisms of global planetary change and the possibility that there is microbial life on Mars. David Harland considers the issue of life on Mars in parallel with the origin of life on Earth. At the time the Viking instruments were designed, it was thought that all terrestrial life ultimately derived its energy from sunlight and that the earliest form of life was the cyanobacteria with chlorophyll for photosynthesis. It was assumed the same would be the case on Mars and that microbial life would be on or near the surface that the Vikings had sampled. In parallel with these NASA projects, the European Space Agency developed the Mars Express remote sensing orbiter, which has detected traces of methane that may have been released by microbes. If microbial life is found on Mars, will it be based on DNA? Will this indicate that life developed independently? Or that it has characteristics in common with the most ancient forms of terrestrial life? If life is found on two planets in the same planetary system, this would favour the panspermia hypothesis. And if martian life is radically different, then in light of the discovery of planetary systems around other stars, this would, as remarked by Philip Morrison of MIT, transform life from the status of a miracle to that of a statistic. These are all questions that the exploration of Mars for life is aimed to answer.
