Britannica Mathematics in Context ,1997 Mathematics in Context: Looking at an angle ,1998 *Standards-based Mathematics Assessment in Middle School* Thomas A. Romberg,2004 This volume takes an in depth look at the problems and practices involved in conducting formative assessments in middle school mathematics classrooms In these chapters researchers and teachers identify the challenges teachers faced as they attempted to implement new assessment procedures moving from more traditional methods to an emphasis in the quality of student work This authoritative book Documents the shift from traditional ways of judging student performance tests to measure what students know to reform notions of mathematical literacy documenting students growth in understanding specific content domains Discusses four key steps in the change process that helped teachers to accomplish the necessary shift in assessment practices Includes two chapters written by teachers that describe their personal experiences with implementing these new practices in the classroom and outlines a professional development program that evolved as a consequence of the work done by the teachers and students discussed in this book **Mathematics in Context: Statistics and the environment** ,1998 Mathematics in Context ,1998 **Everyday Matters in Science and Mathematics** Ricardo Nemirovsky,Ann S. Rosebery,Jesse Solomon,Beth Warren,2004-12-13 This book re examines the dichotomy between the everyday and the disciplinary in mathematics and science education and explores alternatives to this opposition from points of view grounded in the close examination of complex classroom events It makes the case that students everyday experience and knowledge in their entire manifold forms matter crucially in learning sciences and mathematics The contributions of 13 research teams are organized around three themes 1 the experiences of students in encounters with everyday matters of a discipline 2 the concerns of curriculum designers including teachers as they design activities intended to focus on everyday matters of a discipline and 3 the actions of teachers as they create classroom encounters with everyday matters of a discipline As a whole the volume reflects the shift in the field of educational research in recent years away from formal structural models of learning toward emphasizing its situated nature and the sociocultural bases of teaching and learning At least two trends increasing awareness that formal theories can be useful guides but are always partial and provisional in how they disclose classroom experiences and the widespread availability of video and audio equipment that enables effortless recording of classroom interactions have reoriented the field by allowing researchers and teachers to look at learning starting with complex classroom events rather than formal theories of learning Such examinations are not meant to replace the work on general theoretical frameworks but to ground them in actual complex events This reorientation means that researchers and teachers can now encounter the complexity of learning and teaching as lived human meaning making experiences Immersion in this complexity compels rethinking assumptions about the dichotomies that have traditionally organized the field s thinking about learning Further it has important implications for how the relationship between theory and practice in understanding teaching and learning is

Second Handbook of Research on Mathematics Teaching and Learning Frank K. Lester, 2007-02-01 The audience remains much the same as for the 1992 Handbook namely mathematics education researchers and other scholars conducting work in mathematics education This group includes college and university faculty graduate students investigators in research and development centers and staff members at federal state and local agencies that conduct and use research within the discipline of mathematics The intent of the authors of this volume is to provide useful perspectives as well as pertinent information for conducting investigations that are informed by previous work The Handbook should also be a useful textbook for graduate research seminars In addition to the audience mentioned above the present Handbook contains chapters that should be relevant to four other groups teacher educators curriculum developers state and national policy makers and test developers and others involved with assessment Taken as a whole the chapters reflect the mathematics education research community's willingness to accept the challenge of helping the public understand what mathematics education research is all about and what the relevance of their research findings might be for those outside their immediate community

Didactical Phenomenology of Mathematical Structures Hans Freudenthal, 2005-11-28 The launch of a new book series is always a challenging event not only for the Editorial Board and the Publisher but also and more particularly for the first author Both the Editorial Board and the Publisher are delighted that the first author in this series is well able to meet the challenge Professor Freudenthal needs no introduction to anyone in the Mathematics Education field and it is particularly fitting that his book should be the first in this new series because it was in 1968 that he and Reidel produced the first issue of the journal *Educational Studies in Mathematics* Breaking fresh ground is therefore nothing new to Professor Freudenthal and this book illustrates well his pleasure at such a task To be strictly correct the ground which he has broken here is not new but as with Mathematics as an Educational Task and Weeding and Sowing it is rather the novelty of the manner in which he has carried out his analysis which provides us with so many fresh perspectives It is our intention that this new book series should provide those who work in the emerging discipline of mathematics education with an essential resource and at a time of considerable concern about the whole mathematics curriculum this book represents just such a resource

Challenging Perspectives on Mathematics Classroom Communication Anna Chronaki, Iben Maj Christiansen, 2006-05-01. The editors and contributors of these ten articles focus on the idea that communication includes both what is happening and being said among participants in a classroom and also the politics, values, and ideologies that serve as the foundation of the practice. They describe how communication thereby involves register, representation, and contexts through media, human interfaces in the classroom, and in interpreting mathematics as a text. How communication in mathematics teaching becomes social interaction in cooperative settings and classroom activities and how communication translates into practice, community, identity, and policy.
