Lovelock And Gaia Signs Of Life:

An Analysis of James E. Lovelock's Gaia Mohammad Shamsudduha, 2017-07-05 Gaia A New Look At Life on Earth may continue to divide opinion but nobody can deny that the book offers a powerful insight into the creative thinking of its author James E Lovelock Published in 1979 Gaia offered a radically new hypothesis the Earth Lovelock argued is a living entity Together the planet and all its separate living organisms form a single self regulating body sustaining life and helping it evolve through time Lovelock sees humans as no more special than other elements of the planet railing against the once widely held belief that the good of mankind is the only thing that matters Despite being seen as radical and even idiotic on its publication a version of Lovelock s viewpoint has found resonance in contemporary debates about the environment and climate and has now broadly come to be accepted by modern thinkers As man s effects on the climate become increasingly extreme more and more elements of the Earth s self regulation seem to be unveiled forcing scientists to ask how far the planet might be able to go in order self regulate effectively Indeed despite its far fetched elements Lovelock s Gaia thesis seems to ring more convincingly today than ever before that it does is largely a result of the critical thinking skills that allowed Lovelock to produce novel explanations for existing evidence and above all to connect existing fragments of evidence together in new ways

The Earth Is Our Home Nelson Rivera, 2016-11-14 This book demonstrates that Mary Midgley's philosophy of evolution points the way towards considering the earth as our only true home since we are products of this planet and its evolving and complex life along with every other organism From the knowledge of ourselves as knowing animals with a biological as well as a cultural history Midgley proposes the elaboration of an evolutionary epistemology that situates us firmly on the earth together with other creatures while at the same time helping us to build knowledge of the world from the complexity of the human experience I like to call this approach by a known theological analogy a view from below that is from the underside of the world from the realms of nature and history Such an approach does not begin by assuming conceptions of design or order in nature a view that we term from above although it does not rule out the possibility of teleological or metaphysical

constructions of reality in the long run This down to earth approach I consider essential for any philosophy or theology that wants to take evolutionary theory seriously while committed to a proper and non dismissive assessment of religious views
