Possible Relationships Between Solar Activity and Meteorological Phenomena William R. Bandeen, Stephen P. Maran, 1974
Possible Relationship Between Solar Activity and Meteorological Phenomena William R. Bandeen, Stephen P. Maran, 1975
A symposium was conducted in which the following questions were discussed
1 the evidence concerning possible relationships between solar activity and meteorological phenomena
2 plausible physical mechanisms to explain these relationships and
3 kinds of critical measurements needed to determine the nature of solar meteorological relationships and or the mechanisms to explain them and which of these measurements can be accomplished best from space

Solar-Terrestrial Relations Leonty Miroshnichenko, 2023-05-24
This book presents a brief review of modern concepts of the Sun Earth problem and proposed physical mechanisms of solar terrestrial relations STR. This field covers a wide range of fundamental and actual applied problems of paramount importance: Space Weather, radiation hazard in space, functioning of space borne and ground based technological systems, heliobiology etc. It is also closely tied with some general gnosiological problems. The author provides state of the art information about existing problems and discusses different channels for extraterrestrial influences at the up to date level: electromagnetic waves and fields, total solar irradiance, solar wind, energetic solar particles, galactic cosmic rays, cosmic dust etc. Some of the well known and suggested STR effects and corresponding physical mechanisms are illustrated by several examples. In particular, a number of different external signals in observed changes of terrestrial climate and weather are considered. Especially, an expected impact of geophysical disturbances on the accuracy of some precise physical measurements and experiments is analysed. Due attention is paid to the heliobiological aspects of STR. Particular emphasis is on the multifactor nature of magneto biological effect MBE, its non stationary and non linear behaviour. The author also discusses main features of different physical mechanisms: electromagnetic fields, ionising radiation, triggers, rhythmic and resonances in solar terrestrial systems and their applicability to the Sun Earth problem. The most of them are still needed in more sophisticated theoretical development and experimental confirmation. The main goals of interdisciplinary studies in this field are to determine partial impacts of solar geomagnetic variability on the terrestrial environments and estimate separate relative contributions of different factors into various STR phenomena. The book is based on lectures given on advanced undergraduate level and will also benefit newcomers, physicists and engineers to the field.

The Hidden Link Between Earth's Magnetic Field and Climate Kilifarska N.A., Bakmutov V.G., Melnyk G.V., 2020-06-19 The Hidden Link Between Earth's Magnetic Field and Climate offers a new framework of understanding and interpretation for both well known and less known relations between different geophysical and meteorological variables which can improve the quality of climate modeling The book reviews the most current research on both current and paleo data to introduce a causal chain of interactions between the geomagnetic field energetic particles which bombard the Earth's atmosphere ozone and humidity near the tropopause and surface temperature The impacts of these complicated interactions is not uniformly distributed over the globe thus contributing to our understanding of regional differences in climatic changes and the asymmetrical ozone distribution over the globe Covers the newly discovered autocatalytic cycle for ozone production in the lower stratosphere providing a better understanding of the heterogeneous distribution of ozone globally Outlines a mechanism for the lower stratospheric ozone influence on the temperature and humidity of the upper troposphere Provides a single resource on research in energetic particles modulation by heterogeneous geomagnetic fields mechanisms of the influence of particles on the atmospheric ozone and the influence of ozone on climate *Technical Note*, 1921

The Sun-Climate Connection Over the Last Millennium Facts and Questions Maxim Ogurtsov, Risto Jalkanen, Markus Lindholm, Svetlana Veretenenko, 2015-01-02 The search for a cause of the global warming phenomenon on our planet has sparked some interest

in the scientific community The connection between changes occurring in the sun and global warming presents one fundamental perspective which has been investigated by a number of scientific research groups In recent times there have been some promising results that might help us uncover the clues about such a link The Sun Climate Connection over the Last Millennium facts and questions presents fundamental information about the solar activity space weather terrestrial climates and their variations over an extended period of time The information presented is a set of analyses based on modern methods of statistical analysis of non stationary time series including Fourier wavelet and singular spectral analysis while considering space weather phenomena solar winds solar flares aurora borealis etc and other terrestrial manifestations of solar activity The physical mechanisms potentially linking solar activity and space weather to climate are discussed based on these analyses The eBook also provides some context of modern millennial temperature reconstructions for explaining global warming in the 20th century Scenarios of the solar activity and climate evolution throughout the 21st century are considered on the basis of the updated data The eBook provides useful facts for researchers seeking information on climate and space research with respect to solar phenomena

Earth-Moon Relationships Cesare Barbieri, Francesca Rampazzi, 2013-06-29 Sediments and sedimentary processes on the Moon and Earth are very different In the absence of water an atmosphere the magnetosphere and much less oxygen in its rocks the Moon has neither clay minerals nor carbonates and no Fe₃ Mechanical weathering by impacts is the principal process of sediment generation on the Moon on Earth chemical weathering predominates Whereas processes of sediment transport are principally ballistic on the Moon movement by air water and ice prevail on the Earth The radical differences between Earth and Moon sediments make them useful end members between which all sediments of all terrestrial planetary bodies are expected to lie The purpose of this paper is 1 to compare and contrast major characteristics of the origin transportation deposition and preservation of sediments especially dust in the Earth and the Moon and 2 to suggest how sediments of other

rocky planetary bodies especially Mars may fit in between the sediments of the Earth and the Moon
