A Connotational Theory of Program Structure James S. Royer,1987-08-26 This book presents developments of a language independent theory of program structure The theory features a simple natural notion of control structure which is much broader than in other theories of programming languages such as denotational semantics and program schemes This notion permits treatment of control structures which involve not only the denotation of programs in their input output behavior but also their structure size run times etc The theory also treats the relation of control structure and complexity properties of programming languages The book focuses on expressive interdependencies of control structures which control structures can be expressed by which others A general method of proving control structures expressively independent is developed The book also considers characterizations of the expressive power of general purpose programming languages in terms of control structures Several new characterizations are presented and two compactness results for such characterizations are shown

The Munich Project CIP ,1988-01-13 This book is the second of two volumes

that present the main results which emerged from the project CIP Computer Aided Intuition Guided Programming at the Technical University of Munich Its central theme is program development by transformation a methodology which is becoming more and more important Whereas Volume I contains the description and formal specification of a wide spectrum language CIP L particularly tailored to the needs of transformational programming Volume II serves a double purpose First it describes a system called CIP S that is to assist a programmer in the method of transformational programming Second it gives a non toy example for this very method since it contains a formal specification of the system core and transformational developments for the more interesting system routines Based on a formal calculus of program transformations the informal requirements for the system are stated Then the system core is formally specified using the algebraic data types and the pre algorithmic logical constructs of the wide spectrum language CIP L It is demonstrated how executable procedural level programs can be developed from this specification according to formal rules The extensive collection of these rules is also contained in the book it can be used as the basis for further developments using this method Since the system has been designed in such a way that it is parameterized with the concrete programming language to be transformed the book also contains a guide how to actualize this parameter the proceeding is exemplified with a small subset of CIP L

Encyclopedia of Microcomputers Allen Kent, James G. Williams, 1989-10-05 The Encyclopedia of Microcomputers serves as the ideal companion reference to the popular Encyclopedia of Computer Science and Technology Now in its 10th year of publication this timely reference work details the broad spectrum of microcomputer technology including microcomputer history explains and illustrates the use of microcomputers throughout academe business government and society in general and assesses the future impact of this rapidly changing technology *PORTAL Language Description* Arnold Businger, 1988-03-23 Systems of Reductions Benjamin Benninghofen, Susanne Kemmerich, Michael M. Richter, 1987-11-25 *Global Dynamics of the Earth* Roberto Sabadini, Bert Vermeersen, 2004-04-30 This volume opens up new perspectives on the physics of the Earth s interior for graduate students and researchers working in the fields of geophysics and geodesy It looks at our planet in an integrated fashion linking the physics of its interior to the geophysical and geodetic techniques that record over a broad spectrum of spatial wavelengths the ongoing modifications in the shape and gravity field of the planet Basic issues related to the rheological properties of the Earth s mantle and to its slow deformation will be understood in both mathematical and physical terms within the framework of an analytical normal mode relaxation theory Fundamentals of this theory are developed in the first tutorial part The second part deals with a wide range of applications ranging from changes in the Earth s rotation to post seismic deformation and sea level variations induced by post glacial rebound In the study of the physics of the Earth s interior the book bridges the gap between seismology and geodynamics MetaSoft Primer Andrzej Blikle, 1987-11-25 The book is devoted to a simplified set theoretic version of denotational semantics where sets are used in place of Scott s reflexive domains and where jumps are described without

continuations This approach has emerged as a reaction to the sophisticated model of traditional semantics It was also strongly stimulated by the applications of denotational semantics and especially by its software industry oriented version known as VDM Vienna Development Method The new approach was successfully tested on several examples Based on this approach the Polish Academy of Sciences created the project MetaSoft aimed at the development of a definitional metalanguage for software engineering The approach has also been chosen in the project RAISE ESPRIT which aims at a similar goal The book consists of two parts Part One is devoted to the mathematical foundations of the future definitional metalanguage of MetaSoft This part also introduces an appropriate notation Part Two shows the applications of this metalanguage There the denotational definition of a subset of Pascal is discussed with particular emphasis on Pascal types
