Lucene In Action:

Lucene in Action Otis Gospodnetić, Erik Hatcher, Michael McCandless, 2010-07-08 When Lucene first hit the scene five years ago it was nothing short of amazing. By using this open source highly scalable super fast search engine developers could integrate search into applications quickly and efficiently. A lot has changed since then search has grown from a nice to have feature into an indispensable part of most enterprise applications. Lucene now powers search in diverse companies including Akamai, Netflix, LinkedIn, Technorati, HotJobs, Epiphany, FedEx, Mayo Clinic, MIT, New Scientist Magazine and many others. Some things remain the same though Lucene still delivers high performance search features in a disarmingly easy to use API. Due to its vibrant and diverse open source community of developers and users Lucene is relentlessly improving with evolutions to APIs, significant new features such as payloads and a huge increase as much as 8x in indexing speed with Lucene 2.3. And with clear writing, reusable examples and unmatched advice on best practices, Lucene in Action Second Edition is still the definitive guide to developing with Lucene. Purchase of the print book comes with an offer of a free PDF, ePub and Kindle eBook from Manning. Also available is all code from the book.

[Collective Intelligence in Action](#) Satnam Alag, 2008-09-30 There's a great deal of wisdom in a crowd but how do you listen to a thousand people talking at once? Identifying the wants, needs and knowledge of internet users can be like listening to a mob. In the Web 2.0 era leveraging the collective power of user contributions, interactions and feedback is the key to market dominance. A new category of powerful programming techniques lets you discover the patterns, interrelationships and individual profiles the collective intelligence locked in the data people leave behind as they surf websites, post blogs and interact with other users. Collective Intelligence in Action is a hands on guidebook for implementing collective intelligence concepts using Java. It is the first Java based book to emphasize the underlying algorithms and technical implementation of vital data gathering and mining techniques like analyzing trends, discovering relationships and making predictions. It provides a pragmatic approach to personalization by combining content based analysis with collaborative approaches. This book is for Java developers implementing Collective Intelligence in real high use applications. Following a running example in which you harvest and use information from blogs you learn to develop software that you can embed in your own applications. The code examples are immediately reusable and give the Java developer a working collective intelligence toolkit. Along the way you work with a number of APIs and open source toolkits including text analysis and search using Lucene, web crawling using Nutch and applying machine learning algorithms using WEKA and the Java Data Mining JDM standard. Purchase of the print book comes with an offer of a free PDF, ePub and Kindle eBook from Manning. Also available is all code from the book.
