**Exploring the Moon**

David M. Harland, 2008-04-16 In this comprehensive overview of Man's relationship with his planet's nearest neighbor David Harland opens with a review of the robotic probes namely the Rangers which returned television before crashing into the Moon the Surveyors which soft landed in order to investigate the nature of the surface and the Lunar Orbiters which mapped prospective Apollo landing sites He then outlines the historic landing by Apollo 11 and the final three missions of comprehensive geological investigations He concludes with a review of the robotic spacecraft that made remote sensing observations of the Moon This Commemorative Edition includes a foreword by one of the original astronauts as well as an extra section reviewing the prospect of renewed exploration there New graphics and images are also included **A**

**Moon** Yuriy Shkuratov, Gordon Videen, Vadym Kaydash, 2025-01-16 Optics of the Moon offers a modern approach to lunar remote sensing It presents methods for interpreting optics of surfaces with complicated structures in particular the lunar regolith For example this book illustrates how phase ratio techniques can lead to the detection of surface structure anomalies and describes polarimetric studies of the lunar surface and their use This book addresses many questions related to the surfaces of the Moon such as why the Moon looks like a ball at a large phase angle and like a disk in full moon why the lunar surface has slight color variations and why at large phase angles its polarization degree closely correlates with albedo Including historical perspectives case studies maps and figures to enhance the understanding of both theory and techniques Optics of the Moon is a valuable resource for researchers and students in lunar and planetary science and remote sensing Includes case studies maps and color figures to illustrate concepts clearly with a specific application to the Moon Presents theories alongside experimental and observational data to support and describe modern techniques Communicates new approaches and methods related to the optics of lunar surfaces *The Space Age Generation* William Sheehan, Klaus R.

Brasch, 2024-03-05 The Space Age Generation shares the lives and careers of a dozen men and women whose passion for science was sparked by an astounding era the golden age of space science These scientists historians and astronomers lived and participated in an amazing time that not only saw humans step foot on the Moon but also saw human made spacecraft travel throughout our solar system *The Value of the Moon* Paul D. Spudis, 2016-04-26 While the Moon was once thought to hold the key to space exploration in recent decades the U S has largely turned its sights toward Mars and other celestial bodies instead In The Value of the Moon lunar scientist Paul Spudis argues that the U S can and should return to the moon in order to remain a world leader in space utilization and development and a participant in and beneficiary of a new lunar economy Spudis explores three reasons for returning to the Moon it is close it is interesting and it is useful The proximity of the Moon not only allows for frequent launches but also control of any machinery we place there It is interesting because

recorded deep on its surface and in its craters is the preserved history of the moon the sun and indeed the entire galaxy And finally the moon is useful because it is rich with materials and energy The moon Spudis argues is a logical base for further space exploration and even a possible future home for us all Throughout his work Spudis incorporates details about man s fascination with the moon and its place in our shared history He also explores its religious cultural and scientific resonance and assesses its role in the future of spaceflight and our national security and prosperity Treatise on Geophysics ,2015-04-17 Treatise on Geophysics Second Edition is a comprehensive and in depth study of the physics of the Earth beyond what any geophysics text has provided previously Thoroughly revised and updated it provides fundamental and state of the art discussion of all aspects of geophysics A highlight of the second edition is a new volume on Near Surface Geophysics that discusses the role of geophysics in the exploitation and conservation of natural resources and the assessment of degradation of natural systems by pollution Additional features include new material in the Planets and Moon Mantle Dynamics Core Dynamics Crustal and Lithosphere Dynamics Evolution of the Earth and Geodesy volumes New material is also presented on the uses of Earth gravity measurements This title is essential for professionals researchers professors and advanced undergraduate and graduate students in the fields of Geophysics and Earth system science Comprehensive and detailed coverage of all aspects of geophysics Fundamental and state of the art discussions of all research topics Integration of topics into a coherent whole **New Views of the Moon** Bradley L. Jolliff,Mark A. Wieczorek,Charles K. Shearer,Clive R. Neal,2018-12-17 Volume 60 of Reviews in Mineralogy and Geochemistry assesses the current state of knowledge of lunar geoscience given the data sets provided by missions of the 1990 s and lists remaining key questions as well as new ones for future exploration to address It documents how a planet or moon other than the world on which we live can be studied and understood in light of integrated suites of specific kinds of information The Moon is the only body other than Earth for which we have material samples of known geologic context for study This volume seeks to show how the different kinds of information gained about the Moon relate to each other and also to learn from this experience thus allowing more efficient planning for the exploration of other worlds **Deep Impact Mission: Looking Beneath the Surface of a Cometary Nucleus** C.T. Russell,2006-01-16 Deep Impact or at least part of the flight system is designed to crash into comet 9P Tempel 1 This bold mission design enables cometary researchers to peer into the cometary nucleus analyzing the excavated material with its imagers and spectrometers The book describes the mission its objectives expected results payload and data products in articles written by those most closely involved This mission has the potential of revolutionizing our understanding of the cometary nucleus NASA Technical Memorandum ,1963 Reviews in astronomy and space sciences Christopher H.
