Moon Rocks:

The Greatest Lie on Earth (Expanded Edition) Edward Hendrie, 2018-09-12 This book reveals the mother of all conspiracies It sets forth biblical proof and irrefutable evidence that will cause the scales to fall from your eyes and reveal that the world you thought existed is a myth The most universally accepted scientific belief today is that the earth is a globe spinning on its axis at a speed of approximately 1 000 miles per hour at the equator while at the same time it is orbiting the sun at approximately 66 600 miles per hour All of this is happening as the sun in turn is supposed to be hurtling through the Milky Way galaxy at approximately 500 000 miles per hour The Milky Way galaxy itself is alleged to be racing through space at a speed ranging from 300 000 to 1 340 000 miles per hour What most people are not told is that the purported spinning orbiting and speeding through space has never been proven In fact every scientific experiment that has ever been performed to determine the motion of the earth has proven that the earth is stationary Yet textbooks ignore the scientific proof that contradicts the myth of a spinning and orbiting globe Christian schools have been hoodwinked into teaching heliocentrism despite the clear teaching in the bible that the earth is not a sphere and does not move This book reveals the evil forces behind the heliocentric deception and why scientists and the Christian churches have gone along with it [Rocks: A Very Short Introduction](#) Jan Zalasiewicz, 2016-12-01 Rocks more than anything else underpin our lives They make up the solid structure of the Earth and of other rocky planets and are present at the cores of gas giant planets We live on the rocky surface of the planet grow our food on weathered debris derived from rocks and we obtain nearly all of the raw materials with which we found our civilization from rocks From the Earth's crust to building bricks rocks contain our sense of planetary history and are a guide to our future In this Very Short Introduction Jan Zalsiewicz looks at the nature and variety of rocks and the processes by which they are formed Starting from the origin of rocks and their key role in the formation of the Earth he considers what we know about the deep rocks of the mantle and core and what rocks can tell us about the evolution of the Earth and looks at those found in outer space and on other planets ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable **Rock Climbing Washington** Jeff Smoot, 2019-05-01 This updated edition of Rock Climbing Washington features more than 1 500 routes throughout the state of Washington Explore the granite cliffs of Index Leavenworth Darrington and Tieton River Canyon tackle the exposed alpine routes on the spires at Washington Pass or hang from steep sport climbs at North Bend Frenchman Coulee and Marcus and China Bend near Spokane *Aerospace Science* United States. PRODUCT OVERSTOCK SALE Significantly reduced list price This new book from the NASA History Series tackles an interesting duo of biological problems that will be familiar to anybody who has seen photos of Apollo astronauts quarantined after their return to Earth Namely how do we avoid contaminating celestial bodies with Earthly germs when we send spacecraft to study these bodies and how do we avoid spreading foreign biological matter from space when our robotic and human spacefarers return to Earth Biological matter from an external system could potentially cause an unchecked epidemic either on Earth or in space so strict precautions are necessary Each time a space vehicle visits another world it runs the risk of forever changing that extraterrestrial environment We are surrounded on Earth by a m lange of different microorganisms and if some of these hitchhike onboard a space mission they could contaminate and start colonies on a different planet Such an occurrence would irrevocably alter the nature of that world compromise all future scientific exploration of the body and possibly damage any extant life on it By inadvertently carrying exotic organisms back to Earth on our spacecraft we also risk the release of biohazardous materials into our own ecosystem Such concerns were recognized by scientists even before the 1957 launch of Sputnik This book presents the history of planetary protection by tracing the responses to the above concerns on NASA s missions to the Moon Mars Venus Jupiter Saturn and many smaller bodies of our solar system The book relates the extensive efforts put forth by NASA to plan operations and prepare space vehicles that return exemplary science without contaminating the biospheres of other worlds or our own To protect irreplaceable environments NASA has committed to conducting space exploration in a manner that is protective of the bodies visited as well as of our own planet *NASA EP.*
