

Moon Without Light

**John NEWTON (Rector of St. Mary
Woolnoth.)**

Moon Without Light:

Form without Matter Mark Eli Kalderon, 2015-01-29 Mark Eli Kalderon presents an original study in the philosophy of perception written in the medium of historiography. He considers the phenomenology and metaphysics of sensory presentation through the examination of an ancient aporia. Specifically, he argues that a puzzle about perception at a distance is behind Empedocles' theory of vision. Empedocles conceives of perception as a mode of material assimilation, but this raises a puzzle about color vision since color vision seems to present colors that inhere in distant objects. But if the colors inhere in distant objects, how can they be taken in by the organ of sight and so be palpable to sense? Aristotle purports to resolve this puzzle in his definition of perception as the assimilation of sensible form without the matter of the perceived particular. Aristotle explicitly criticizes Empedocles, though he is keen to retain the idea that perception is a mode of assimilation if not a material mode. Aristotle's notorious definition has long puzzled commentators. Kalderon shows how read in light of Empedoclean puzzlement about the sensory presentation of remote objects, Aristotle's definition of perception can be better understood. Moreover, when so read, the resulting conception of perception is both attractive and defensible.

What Civilization Is Not Devajit Bhuyan, 2023-02-12 Civilization is in a race between education and catastrophe. Let us learn the truth and spread it as far and wide as our circumstances allow. For the truth is the greatest weapon we have. H. G. Wells. Whenever we speak about civilization, we understand it as a society characterized by the existence of the state that has developed culture, language, a writing system, books, currency, banking, trading, etc. Civilizations are additionally characterized by specialization of labour, agriculture, architecture, infrastructure, technological advancement, computers, internets, destructive bombs, and nuclear weapons. The civilization that started with the discovery of fire, wheel, and agriculture started to move in the path of technological development with lightning speed since the last part of the 20th Century. However, the age-old mindset of people regarding war, discrimination, violence, destruction, and killing of people on flimsy grounds has not at all changed. Technology is a double-edged sword, making and breaking civilization since time immemorial. We have seen first and second world wars, but we have learnt no lesson from it. Only love, brotherhood, and toleration can save our modern civilization, not technology alone. This book is written during the Russia-Ukraine war to promote brotherhood and educate fellow human beings to take care of our present civilization and save it from destruction and annihilation like old civilizations.

Exploring Space: 1999 John Kenneth Muir, 2015-09-15 Starring internationally renowned actors Martin Landau, Barbara Bain, Barry Morse, and Catherine Schell, the British-made *Space: 1999* was the only truly original space adventure of the mid-1970s. Sandwiched between the demise of the original *Star Trek* and the opening of the *Star Wars* series on the big screen, *Space: 1999* featured a richly visualized world where space was terrifying and mysterious, where not all problems were solvable by technology, and the space travelers were very human. From the science-fiction show's conception in 1973 to its cancellation in 1977, this reference work covers each of the 48 episodes in depth, including a full plot synopsis, writer/director/guest star credits, and

critical commentary that examines both the episode and other shows that have used similar plotlines The popularity of Space 1999 memorabilia and its many fan clubs are fully discussed along with the possibility of a future movie or reunion show that would tie up the loose ends caused by the show's abrupt cancellation
