

# How Plants Grow

Plants are like vacuums that suck nutrients, water and air from the soil as they grow. The nutrients consumed in the largest amounts are nitrogen (N), phosphorus (P) and potassium (K). Farmers work hard to grow healthy crops to feed the world. They must replace the soil nutrients each harvest to ensure the new plants have the proper food to grow healthy and strong.

Phosphorus (P) helps plants catch energy from the sun.

Nitrogen (N) keeps plants healthy and green.

Potassium (K) keeps plants from wilting.

Potassium (K) protects plants from disease and helps provide them strength.

Nitrogen (N) makes plants strong.

Healthy roots send phosphorus (P).
