Renouf,2012-12-06 We teach our students of behavioural science that one first defines a research problem and then the most appropriate animal is selected to investigate hypotheses The reverse order of events is improper a particular class of animals should not be studied for its own sake In the case of the Pinnipeds seals sea lions fur seals and walruses the organism and the problem are essentially the same The research questions presented in this volume in one way or another relate to survival in two worlds the ocean for foraging and the terrain at its edge or frozen above it for breeding The evolution of Pinniped behaviour and the mechanisms which underlie it are a consequence of having to cope with two seemingly incompatible sets of environmental constraints The physiological adaptations for concomitant functioning in two media with very different physical characteristics have produced correlated behavioural modifications The energetic demands of reproduction and foraging are idiosyncratic because each activity occurs on opposite sides of the air water interface As a result the mating system must reconcile aquatic design for such functions as locomotion and thermoregulation with the terrestrial requirements for successful pupping Similarly the ecology of this dual habitat prescribes the rules governing the behaviour of the neonate and its interactions with its mother **Encyclopedia of Marine Mammals** Bernd Würsig,J.G.M. Thewissen,Kit M. Kovacs,2017-11-27 The Encyclopedia of Marine Mammals Third Edition covers the ecology behavior conservation evolution form and function of whales dolphins seals sea lions manatees dugongs otters and polar bears This edition provides new content on anthropogenic concerns latest information on emerging threats such as ocean noise and impacts of climate change With authors and editors who are world experts this new edition is a critical resource for all who are interested in marine mammals especially upper level undergraduate and graduate students researchers and managers and is a top reference for those in related fields from oceanographers to environmental scientists Significant content and topic updates as well as the addition of new topics in such areas as anthropogenic disturbance Visual maps of

the oceans and seas mentioned in contributions helping to place the geographical features described in the text with clear consistent species illustrations Written to help users learn new information or brush up on a topic quickly with the references at the end of each entry to help guide readers into more specialist literature *California Sea Lions* ,1995 *Fishery Bulletin* ,2004
