Numerical Intrigue Formerly Numerical Allusions:

Concise Guide to Numerical Algorithmics John Lawrence Nazareth, 2023-01-02 Numerical Algorithmic Science and Engineering NAS E or more compactly Numerical Algorithmics is the theoretical and empirical study and the practical implementation and application of algorithms for solving finite dimensional problems of a numeric nature The variables of such problems are either discrete valued or continuous over the reals or and as is often the case a combination of the two and they may or may not have an underlying network graph structure This re emerging discipline of numerical algorithmics within computer science is the counterpart of the now well established discipline of numerical analysis within mathematics where the latter s emphasis is on infinite dimensional continuous numerical problems and their finite dimensional continuous approximates A discussion of the underlying rationale for numerical algorithmics its foundational models of computation its organizational details and its role in conjunction with numerical analysis in support of the modern modus operandi of scientific computing or computational science engineering is the primary focus of this short monograph It comprises six chapters each with its own bibliography Chapters 2 3 and 6 present the book s primary content Chapters 1 4 and 5 are briefer and they provide contextual material for the three primary chapters and smooth the transition between them Mathematical formalism has been kept to a minimum and whenever possible visual and verbal forms of presentation are employed and the discussion enlivened through the use of motivating quotations and illustrative examples The reader is expected to have a working knowledge of the basics of computer science an exposure to basic linear algebra and calculus and perhaps some real analysis and an understanding of elementary mathematical concepts such as convexity of sets and functions networks and graphs and so on Although this book is not suitable for use as the principal textbook for a course on numerical algorithmics NAS E it will be of value as a supplementary reference for a variety of courses It can also serve as the primary text for a research seminar And it can be recommended for self study of the foundations and organization of NAS E to graduate and advanced undergraduate students with sufficient mathematical maturity and a background in computing When departments of computer science were first created within universities worldwide during the middle of the twentieth century numerical analysis was an important part of the curriculum Its role within the discipline of computer science has greatly diminished over time if not vanished altogether and specialists in that area are now to be found mainly within other fields in particular mathematics and the physical sciences A central concern of this monograph is the regrettable downward trajectory of numerical analysis within computer science and how it can be arrested and suitably reconstituted Resorting to a biblical metaphor numerical algorithmics NAS E as envisioned herein is neither old wine in new bottles nor new wine in old bottles but rather this re emerging discipline is a decantation of an age old vintage that can hopefully find its proper place within the larger arena of computer science and at what appears now to be an opportune time *Approximation Concepts for Numerical Airfoil Optimization* Garret N. Medieval Damascus Hirschler Konrad Hirschler, 2016-02-19 The written text was a pervasive feature of cultural practices in the medieval Middle East At the heart of book circulation stood libraries that experienced a rapid expansion from the twelfth century onwards While the existence of these libraries is well known our knowledge of their content and structure has been very limited as hardly any medieval Arabic catalogues have been preserved This book discusses the largest and earliest medieval library of the Middle East for which we have documentation the Ashrafiya library in the very centre of Damascus and edits its catalogue This catalogue shows that even book collections attached to Sunni religious institutions could hold rather unexpected titles such as stories from the 1001 Nights manuals for traders medical handbooks Shiite prayers love poetry and texts extolling wine consumption At the same time this library catalogue decisively expands our knowledge of how the books were spatially organised on the bookshelves of such a large medieval library With over 2 000 entries this catalogue is essential reading for anybody interested in the cultural and intellectual history of Arabic societies Setting the Ashrafiya catalogue into a comparative perspective with contemporaneous libraries on the British Isles this book opens new perspectives for the study of medieval libraries

Music Theory in Mamluk Cairo Owen Wright, 2016-04-29 The *yat al ma l b f ilm al adw r wa l ur b* by Ibn Kurr is the only theoretical text of any substance that can be considered representative of musicological discourse in Cairo during the first half of the fourteenth century CE Indeed nothing comparable survives from the whole Mamluk period which extends from 1260 until the Ottoman invasion and conquest of Egypt in 1516 But its value does not derive merely from its fortuitous isolation it is important rather because of the richness of the information it provides with regard to modal and rhythmic structures and also because of the extent to which the definitions it offers differ from those set forth in an interrelated series of major theoretical works in both Arabic and Persian that span the period from the middle of the thirteenth century to the late fifteenth Alongside the presumption of transregional uniformity these texts suggest it consequently asserts the significance of local particularism Owen Wright provides a critical edition of the text itself together with a glossary prefaced by an introduction and a detailed commentary and analysis The introduction provides immediate context situating the work in relation to the dominant theoretical tradition of the period and providing biographical information about the author active in Cairo during the first half of the fourteenth century
