Numerical Methods for the Three-dimensional Shallow Water Equations on Supercomputers E. D. de Goede, 1993 Holl
Zusammenfass *Numerical Methods for Shallow-Water Flow* C.B. Vreugdenhil, 2013-03-09 A wide variety of problems are associated with the flow of shallow water such as atmospheric flows tides storm surges river and coastal flows lake flows tsunamis Numerical simulation is an effective tool in solving them and a great variety of numerical methods are available The first part of the book summarizes the basic physics of shallow water flow needed to use numerical methods under various conditions The second part gives an overview of possible numerical methods together with their stability and accuracy properties as well as with an assessment of their performance under various conditions This enables the reader to select a method for particular applications Correct treatment of boundary conditions often neglected is emphasized The major part of the book is about two dimensional shallow water equations but a discussion of the 3 D form is included The book is intended for researchers and users of shallow water models in oceanographic and meteorological institutes hydraulic engineering and consulting It also provides a major source of information for applied and numerical mathematicians **Scientific Computing on Supercomputers III** J.T. Devreese, P.E. Van Camp, 2013-06-29 The International Workshop on The Use of Supercomputers in Theoretical Science took place on January 24 and 25 1991 at the University of Antwerp UIA Antwerpen Belgium It was the sixth in a series of workshops the first of which took place in 1984 The principal aim of these workshops is to present the state of the art in scientific large scale and high speed computation Computational science has developed into a third methodology equally important now as its theoretical and experimental companions Gradually academic researchers acquired access to a variety of supercomputers and as a consequence computational science has become a major tool for their work It is a pleasure to thank the Belgian National Science Foundation NFWO FNRS and the Ministry of Scientific Affairs for sponsoring the workshop It was organized both in the framework of the Third Cycle Vectorization Parallel Processing and Supercomputers and the Governemental Program in Information Technology We also very much would like to thank the University of Antwerp Universitaire Instelling Antwerpen VIA for financial and material support Special thanks are due to Mrs H Evans for the typing and editing of the manuscripts and for the preparation of the author and subject indexes J T Devreese P E Van Camp University of Antwerp July 1991 v CONIENTS High Performance Numerically Intensive Applications on Distributed Memory Parallel Computers F W Wray Abstract **A Three-dimensional, Finite-difference Model for Estuarine Circulation** Peter E.
