Nutrition And Weight Control For Longevity:

Nutrition and Weight Control for Longevity Lora Brown Wilder, 2008 *Nutrition, Food and Diet in Ageing and Longevity* Suresh I. S. Rattan, Gurcharan Kaur, 2021-10-03 This edited volume is a compilation of 30 articles discussing what constitutes food for health and longevity. The aim is to provide up to date information, insights and future tendencies in the ongoing scientific research about nutritional components, food habits and dietary patterns in different cultures. The health sustaining and health promoting effects of food are certainly founded in its overall composition of macronutrients and micronutrients. However, the consumption of these nutrients is normally in the form of raw or prepared food from the animal and plant sources. The book is divided into four parts and a conclusion and successfully convenes the well established information and knowledge along with the personal views of a diversified group of researchers and academicians on the multifaceted aspects of nutrition, food and diet. The first part reviews the scientific information about proteins, carbohydrates, fats and oils, micronutrients, pro and pre biotics and hormetins along with a discussion of the evolutionary principles and constraints about what is optimal food if any. The second part discusses various kinds of foods and food supplements with respect to their claimed benefits for general health and prevention of some diseases. The third part brings in the cultural aspects such as what are the principles of healthy eating according to the traditional Chinese and Indian systems, what is the importance of meal times and daily rhythms and how different cultures have developed different folk wisdoms for eating for health, longevity and immortality. In the part four, various approaches which are either already in practice or are still in the testing and research phases are discussed and evaluated critically, for example, intermittent fasting and calorie restriction, food based short peptides, senolytics, Ayurvedic compounds, optimal food for old people and food for the prevention of obesity and other metabolic disorders. The overreaching aim of this book is to inform, inspire and encourage students, researchers, educators and medical health professionals thinking about food and food habits in a holistic context of our habits, cultures and patterns. Food cannot be reduced to a pill of nutritional components. Eating food is a complex human behavior, culturally evolved over thousands of years. Perhaps the old adage we are what we eat needs to be modified to we eat what we are.

Japan Nutrition Teiji Nakamura, 2021-11-26 This Open Access auto translation book demonstrates a time series of nutrition improvement in Japan since the introduction of nutrition sciences to Japan about 150 years ago The chapters present the historical event where

nutritional deficiency due to food shortage was improved in almost a century by the introduction of nutrition policy and practices such as the Nutrition Improvement Law. The book contributed to the construction of a longevity nation by resolving the double burden of malnutrition which is a mixture of undernutrition and overnutrition and creating a social environment in which sustainable healthy diets can be accessed. This publication is designed mainly for nutrition specialists: nutritionists, nutrition administrators, medical doctors, pharmacists, nurses, physiotherapists, nutrition educators, cooks, nutrition volunteers, health and nutrition food developers, school lunch managers, and etc. Furthermore, students studying nutrition, teachers involved in the education and training of dietitians, and general consumers who are interested in nutrition, diets, and how to improve malnutrition will find this book useful. Through this book, dietitians, nutrition volunteers, and consumers engaged in nutrition improvement can understand the significance of nutrition improvement and know specific methods. Young nutritionists who will study and research nutrition can learn the importance of nutrition and take pride in nutrition research. The government official who implements nutrition policy can know the concrete method of nutrition policy. Today, people around the world understand the importance of nutrition and are gaining international interest. However, malnutrition has not improved as much as expected. This book is an interesting way for everyone involved in nutrition to learn how to eradicate malnutrition from the world. The translation was done with the help of artificial intelligence machine translation by the service DeepL.com. The present version has been revised technically and linguistically by the author in collaboration with Professor Emeritus Dr Andrew R Durkin of Indiana University.
