Passion for Astronomy Patrick Moore,1992 **Books in Print** ,1991 **The Observer's Year** Patrick Moore,2014-03-12 It was once said that the night sky always looks much the same In fact nothing could be further from the truth There are 365 days in each year 366 in a Leap Year and from an astronomical point of view no two are alike What I aim to do in this book is to go through a complete year and point out some special items of interest for each night It may be a double star a variable star or a nebula it may be a planet or even the Moon in some particular aspect there is plenty of variety Anyone unfamiliar with astronomical terms should consult the Glossary at the end of this book Let it be said at once that you do not need a large and expensive telescope A surprising amount can be seen with the naked eye and binoculars give increased range indeed it is probably fair to say that good binoculars are ideal for the beginner and are far better than very small telescopes Telescopes are of two types refractors and reflectors A refractor collects its light by means of a glass lens known as an objective glass OG the light passes down the telescope tube and is brought to focus where an image is formed and is then magnified by a second lens termed an eyepiece **The British National Bibliography** Arthur James Wells,1996 **The Times Index** ,1977 Indexes the Times Sunday Times and magazine Times literary supplement Times educational supplement Times educational supplement Scotland and the Times higher education supplement
