Climate Change Impacts on High-Altitude Ecosystems Münir Öztürk, Khalid Rehman Hakeem, I. Faridah-Hanum, Recep Efe, 2015-05-05 This book covers studies on the systematics of plant taxa and will include general vegetational aspects and ecological characteristics of plant life at altitudes above 1000 m from different parts of the world. This volume also addresses how upcoming climate change scenarios will impact high altitude plant life. It presents case studies from the most important mountainous areas like the Himalayas, Caucasus and South America covering the countries like Malaysia, Sri Lanka, India, Nepal, Pakistan, Kirghizia, Georgia, Russia, Turkey, Indonesia, Malaysia and the Americas. The book will serve as an invaluable resource source for undergraduates, graduate students and researchers.

Food and Livelihood Securities in Changing Climate of the Himalaya Suresh Chand Rai, 2023-02-08 This book provides viewpoints on a cross sectoral multiscale assessment of food and livelihood security in changing climate, the main global threats of the 21st century. Climate change directly and indirectly influences several aspects of food security primarily in the farming and livestock sectors. The farming sector is the main source of income and employment for about 70% of the Himalayan populace. However, there has been no such study that has comprehensively covered these aspects. Additionally, the book offers critical mitigation measures to adapt to climate change and other uncertainties. The agricultural diversities and livelihood security in the Himalayan region will be sustainable only if farmers applied suggested mitigation measures correctly. This title is appropriate for postgraduates and research scholars of social sciences, environmental sciences and agricultural sciences. Regional planners, government officers, NGOs and many other people who are interested in the Himalayan region as well as local communities will be also beneficial.

Climate Change, Disaster and Adaptations Azizur Rahman Siddiqui, Avijit Sahay, 2022-02-26 This volume examines how local communities respond and adapt to ecological changes and disasters resulting from climate change. The main aim of the book is to understand the range of human responses to ecological change and to contextualise the reasons for adopting any particular adaptive strategy by a community. Through the help of specific case studies presented as individual chapters, the book aims to find out whether adaptation due to environmental stress is an individual decision and therefore is an isolated phenomenon or if resilience and adaptation are part of the same action paradigm of society as a whole in response to environmental change. Of particular interest are the case studies of climate change or disasters that have rendered the site unsuitable for the return of its community at present and thus necessitated the relocation of such communities to new locations. The case studies in the book focus on regions in India but cover different parts of the world as well and address concepts of resilience, vulnerability, risk, adaptation and mitigation. The book will be useful for students and researchers in the fields of geography, disaster management, environmental science and anthropology.
