Tone Moira Jean Winsland Yip, 2002-08-15 This comprehensive textbook provides a clearly organized introduction to tone and tonal phonology *The Structure of Tone* Zhiming Bao, 1999 Annotation This book argues a fresh theory about the structure of tone Bao investigates a wide range of tone sandhi data from various Chinese dialects and other Asian tone languages providing empirical support for his proposal that tone is a formal entity which consists of register and contour Bao establishes a clear typological distinction between register tone languages and contour tone languages whose contour tones have a more complex structure

Frontiers of Phonology Jacques Durand, Francis Katamba, 2014-09-25 Frontiers of Phonology is a collection of essays that present a selective overview of trends in the linguistic analysis of sound structure The essays are written by specialists from Europe Canada and the USA and discuss issues from three broad areas of phonology the nature and representation of phonological features the role and structure of the skeletal tier and syllable structure and the competing claims of derivational and declarative approaches to phonology The book provides a forum for lively discussion of important theoretical topics from various standpoints including metrical and autosegmental phonology dependency phonology and declarative phonology The contributors who are protagonists of these different standpoints compare notes and show the merits of their different approaches The essays discussing derivational issues offer an excellent introduction to the area of constraints based phonology and by covering the phonology of many languages the book provides an understanding of how human languages in general use sound

Principles of Radical CV Phonology van der Hulst Harry van der Hulst, 2020-07-06 Harry van der Hulst's model of Radical CV Phonology has roots in the framework of Dependency Phonology but proposes a rather different geometry which reduces the set of unary elements to just two C and V The model explains the phonological distinctions that function contrastively in the world's languages rather than presenting it as a random list Van der Hulst shows how this model accounts for a number of central claims about markedness and minimal specification He explains how the representational system accounts for phonological rules and shows how this theory can be applied to sign language structure Through comparison to other models he also provides insight into current theories of segmental structure commonly used feature systems as well as recurrent controversies
