Photoemission Studies Of High Temperature Superconductors:

Photoemission Studies of High-Temperature Superconductors David W. Lynch, Clifford G. Olson, 1999-05-28 This book describes the current status and results of photoelectron spectroscopic techniques both theoretical and experimental that have been applied to the study of the cuprate high temperature superconductors The techniques described include angle resolved photoelectron spectroscopy of valence electrons core level spectra XPS and some special variations such as resonance photoemission Attention is paid to the difficulties in interpreting such spectra and to the problems obtaining good sample surfaces and high resolution comparing results from other experimental techniques as well The authors also outline expected future developments in the techniques This book will be of great interest to graduate students and researchers in physics chemistry and materials science with an interest in high temperature superconductors *Photoemission Studies of High-temperature Superconductors* P. A. P. Lindberg, Z. X. Shen, William E. Spicer, Ingolf Lindau, 1990 **Photoemission Studies of High-temperature Superconductors**, 1990 **Studies of High Temperature Superconductors** A. V. Narlikar, 1989 Contributors from around the world present 15 detailed reviews and extended papers on the current state of the research explosion triggered by the 1986 discovery of ceramic oxide high temperature superconductors The interest spans many fields and these papers are aimed at professional scientists a **Photoemission Studies of High Temperature Superconductors and Related Materials** Zhi-Xun Shen, 1989 **Scientific and Technical Aerospace Reports**, 1994 *Thermoelectric Power and Photoemission Studies in High Temperature Superconductors* Adam John Lowe, 1991 High Resolution-angle Resolved Photoemission Studies of High Temperature Superconductors, 1989 Recent photoemission studies of Y 123 and Bi 2212 performed with high energy and angular resolution have provided detailed information on the nature of the states near the Fermi level Measurements of the superconducting gap band dispersion and the density of states near the Fermi level in the normal state all support a Fermi liquid description of these materials 5 refs 4 figs **Physical Properties Of High Temperature Superconductors Iv** Donald M Ginsberg, 1994-04-13 This volume contains two chapters of direct interest for applications The magnetic vortex states and transformations and the effects of c axis coupling on the transport properties In addition the isotope effect is reviewed since reliable data on ultra pure samples are now available The lattice vibrations phonons have been explored extensively by inelastic neutron scattering and infrared absorption and these types of data are reviewed as well The interesting properties of the superconducting doped fullerenes are described some of their most fundamental properties are shared by the superconducting cuprates This book with its subject index like the earlier three volumes in this series will be found useful both by people entering the field and by workers who are already active in it **Energy Research Abstracts**, 1990 *Proceedings of the International Symposium on Frontiers of Science* Chen Ning Yang, Hwa-Tung Nieh, 2003 The International Symposium on Frontiers of Science was held to celebrate the 80th birthday of Chen Ning Yang one of the great physicists of the 20th century and arguably the most

admired living scientist in China today Many of the world's great scientists including sixteen Nobel laureates Fields medallists and Wolf Prize winners converged on Beijing from all corners of the globe to pay tribute to Professor Yang The Symposium was organized by Tsinghua University with which Professor Yang has had a lifelong relationship In 1997 he helped to found the Center for Advanced Study at Tsinghua was appointed to the university's faculty and has since devoted his energy to the growth of the Center This unique and invaluable birthday volume is a collection of the presentations made at the Symposium including fifteen plenary talks seven of which are by Nobel laureates It covers a wide range of topics and mirrors Professor Yang's research and intellectual interests The range of fields encompasses high energy condensed matter mathematical applied bio astro atomic and quantum physics Also included are talks given at the birthday banquet About C N Yang Born in 1922 in Anwei China C N Yang was brought up in the academic atmosphere of Tsinghua University in Beijing where his father was a professor of mathematics He received his college education at the National Southwest Associated University in Kunming China and completed his BSc there in 1942 His MSc was received in 1944 from Tsinghua University He entered the University of Chicago in 1946 where he came under the strong influence of Prof E Fermi After receiving his PhD in 1948 Prof Yang served for a year at the University of Chicago as an instructor Since 1949 he has been associated with the Institute for Advanced Study Princeton where he became a professor in 1955 Prof Yang has worked on various subjects in physics but is mainly interested in statistical mechanics and symmetry principles He is a prolific author his numerous articles appearing in the Bulletin of the American Mathematical Society The Physical Review Reviews of Modern Physics and the Chinese Journal of Physics Prof Yang won the Nobel Prize in Physics in 1957 jointly with T D Lee He has been elected a Fellow of the American Physical Society and of Academia Sinica

Advances in Superconductivity II Takehiko Ishiguro, Koji Kajimura, 2013-03-09 Since the First International Symposium on Superconductivity ISS 88 was held in Nagoya Japan in 1988 significant advances have been achieved in a wide range of high temperature superconductivity research Although the T_c s of recently discovered oxide superconductors still do not exceed the record high value of 125K reported before that meeting the enrichment in the variety of materials should prove useful to the investigation of the fundamental mechanism of superconductivity in these exotic materials The discovery of the n type superconducting oxides proved to oppose the previously held empirical fact that the charge carriers in all oxide superconductors were holes In addition optimization of the charge carrier density has been established as a technique to improve the superconducting properties of the previously known oxide materials Many new experimental and theoretical advances have been made in understanding both the fundamental and the applied aspects of high temperature superconductivity In this latter area various new processing techniques have been investigated and the critical current densities and other significant parameters of both bulk and thin film oxide superconductors are rapidly being improved At this exciting stage of research in high temperature superconductivity it is extremely important to provide an opportunity for researchers from industry academia government

and other institutions around the world to freely exchange information and thus contribute to the further advancement of research
