Encounter with Chaos Joachim Peinke,Jürgen Parisi,Otto E. Rössler,Ruedi Stoop,2012-12-06 Our life is a highly nonlinear process It starts with birth and ends with death in between there are a lot of ups and downs Quite often we believe that stable and steady situations probably easy to capture by linearization are paradisiacal but already after a short period of everyday routine we usually become bored and seek change that is nonlinearities If we reflect for a while we notice that our life and our perceptions are mainly determined by nonlinear phenomena for example events occurring suddenly and unexpectedly One may be surprised by how long scientists tried to explain our world by models based on a linear ansatz Due to the lack of typical nonlinear patterns although everybody experienced nonlinearities nobody could classify them and thus study them further The discoveries of the last few decades have finally provided access to the world of nonlinear phenomena and have initiated a unique inter disciplinary field of research nonlinear science In contrast to the general tendency of science to become more branched out and specialized as the result of any progress nonlinear science has brought together many different disciplines This has been motivated not only by the immense importance of nonlinearities for science but also by the wonderful simplicity of the concepts Models like the logistic map can be easily understood by high school students and have brought revolutionary new insights into our scientific understanding
