Revision Notes In Advanced Level Chemistry Vol 2 Inorganic Chemistry:

Revision Notes in Advanced Level Chemistry Albert Holderness, 1963 *The British Library General Catalogue of Printed Books 1976 to 1982* British Library, 1983 Comprehensive Inorganic Chemistry II, 2013-07-23 Comprehensive Inorganic Chemistry II Nine Volume Set reviews and examines topics of relevance to today's inorganic chemists. Covering more interdisciplinary and high impact areas Comprehensive Inorganic Chemistry II includes biological inorganic chemistry, solid state chemistry, materials chemistry and nanoscience. The work is designed to follow on with a different viewpoint and format from our 1973 work Comprehensive Inorganic Chemistry edited by Bailar, Emelius, Nyholm and Trotman-Dickenson which has received over 2 000 citations. The new work will also complement other recent Elsevier works in this area: Comprehensive Coordination Chemistry and Comprehensive Organometallic Chemistry to form a trio of works covering the whole of modern inorganic chemistry. Chapters are designed to provide a valuable long standing scientific resource for both advanced students new to an area and researchers who need further background or answers to a particular problem on the elements, their compounds or applications. Chapters are written by teams of leading experts under the guidance of the Volume Editors and the Editors in Chief. The articles are written at a level that allows undergraduate students to understand the material while providing active researchers with a ready reference resource for information in the field. The chapters will not provide basic data on the elements which is available from many sources and the original work but instead concentrate on applications of the elements and their compounds. Provides a comprehensive review which serves to put many advances in perspective and allows the reader to make connections to related fields such as biological inorganic chemistry, materials chemistry, solid state chemistry and nanoscience. Inorganic chemistry is rapidly developing which brings about the need for a reference resource such as this that summarises recent developments and simultaneously provide background information. Forms the new definitive source for researchers interested in elements and their applications completely replacing the highly cited first edition which published in 1973. *The British National Bibliography* Arthur James Wells, 1979 **Inorganic Chemistry** Therald Moeller, 1982-06-18 Presents the entire inorganic field as a logical development of basic ideas incorporating significant early contributions, factual data and the resulting modern ideas involving the scope and significance of inorganic chemistry. Proceeds sensibly from the origins of the elements through atomic structure, molecular structure, bonding and properties related to bonding and reactions considered by types, conditions and mechanisms. **General Catalogue of Printed Books** British Museum.
