Revolt Of The Engineers:

The Revolt of the Engineers Edwin T. Layton, 1986 **The Revolt of the Engineers** Edwin T. Layton, 1984 The Revolt of the Engineers Edwin T. Layton (junior.), 1971 *The New Engineer* Sharon Beder, 1998 **Engineers for Change** Matthew Wisnioski, 2012-10-19

An account of conflicts within engineering in the 1960s that helped shape our dominant contemporary understanding of technological change as the driver of history In the late 1960s an eclectic group of engineers joined the antiwar and civil rights activists of the time in agitating for change The engineers were fighting to remake their profession challenging their fellow engineers to embrace a more humane vision of technology In *Engineers for Change* Matthew Wisnioski offers an account of this conflict within engineering linking it to deep seated assumptions about technology and American life The postwar period in America saw a near utopian belief in technology s beneficence Beginning in the mid 1960s however society influenced by the antitechnology writings of such thinkers as Jacques Ellul and Lewis Mumford began to view technology in a more negative light Engineers themselves were seen as conformist organization men propping up the military industrial complex A dissident minority of engineers offered critiques of their profession that appropriated concepts from technology s critics These dissidents were criticized in turn by conservatives who regarded them as countercultural Luddites And yet as Wisnioski shows the radical minority spurred the professional elite to promote a new understanding of technology as a rapidly accelerating force that our institutions are ill equipped to handle The negative consequences of technology spring from its very nature and not from engineering s failures Sociotechnologists were recruited to help society adjust to its technology Wisnioski argues that in responding to the challenges posed by critics within their profession engineers in the 1960s helped shape our dominant contemporary understanding of technological change as the driver of history

The Engineering-Business Nexus Steen Hyldgaard Christensen, Bernard Delahousse, Christelle Didier, Martin Meganck, Mike Murphy, 2018-11-14

Fascinating and compelling in equal measure this volume presents a critical examination of the multilayered relationships between engineering and business In so doing the study also stimulates ethical reflection on how these relationships either enhance or inhibit strategies to address vital issues of our time In the context of geopolitical economic and environmental tendencies the authors explore the world that we should want to create and the role of the engineer and the business manager in this endeavor Throughout this volume the authors identify periods of alignment and periods of tension between engineering and business They look at focal points of the engineering business nexus related to the development of capitalism The book explores past and present movements to reshape reform or reject this nexus The volume is informed by questions of importance for industry as well as for higher education These are What kinds of conflict arise for engineers in their attempts to straddle both professional and organizational commitments How should professionals be managed to avoid a clash of managerial and professional cultures How do engineers create value in firms and

corporations What kinds of tension exist between higher education and industry What challenges does the neoliberal entrepreneurial university pose for management faculty students society and industry Should engineering graduates be ready for work and can they possibly be What kinds of business issues are reflected in engineering education curricula and for what purpose Is there a limit to the degree of business hybridization in engineering degree programs and if so what would be the criterion for its definition Is there a place in engineering education curricula for reflective critique of assumptions related to business and economic thinking One ideal of management and control comes to the fore as the Anthropocene the world transformed into an engineered artefact which includes human existence The volume raises the question as to how engineering and business together should be considered given the fact that the current engineering business nexus remains embedded within an economic model of continual growth By addressing macro level issues such as energy policy sustainable development globalization and social justice this study will both help create awareness and stimulate development of self knowledge among practitioners educators and students thereby ultimately addressing the need for better informed citizens to safeguard planet Earth as a human life supporting system

America by Design David F. Noble, 2013-01-23 Hailed a significant contribution by The New York Times David Noble's book America by Design describes the factors that have shaped the history of scientific technology in the United States Since the beginning technology and industry have been undeniably intertwined and Noble demonstrates how corporate capitalism has not only become the driving force behind the development of technology in this country but also how scientific research particularly within universities has been dominated by the corporations who fund it who go so far as to influence the education of the engineers that will one day

create the technology to be used for capitalist gain Noble reveals that technology often thought to be an independent science has always been a means to an end for the men pulling the strings of Corporate America and it was these men that laid down the plans for the design of the modern nation today **Cambridge Handbook of Engineering Education Research**

Aditya Johri, Barbara M. Olds, 2014-02-10 The Cambridge Handbook of Engineering Education Research is the critical reference source for the growing field of engineering education research featuring the work of world luminaries writing to define and inform this emerging field The Handbook draws extensively on contemporary research in the learning sciences examining how technology affects learners and learning environments and the role of social context in learning Since a landmark issue of the Journal of Engineering Education 2005 in which senior scholars argued for a stronger theoretical and empirically driven agenda engineering education has quickly emerged as a research driven field increasing in both theoretical and empirical work drawing on many social science disciplines disciplinary engineering knowledge and computing The Handbook is based on the research agenda from a series of interdisciplinary colloquia funded by the US National Science Foundation and published in the Journal of Engineering Education in October 2006 Beyond the Typewriter Sharon Hartman Strom, 1992 By World War I managers wanted young women with some high school education for new light manufacturing jobs in the office Women could be paid significantly less than men with equivalent educations and the marriage bar the practice of not hiring or retaining married women ensured that most of them would leave the workplace before the issue of higher salaries arose Encouraged by free training gained in high schools and by working conditions better than those available in factories young working class women sought out office jobs Facing sexual discrimination in most of the professions and higher level office jobs middle class women often found themselves falling into clerical positions Sharon Hartman Strom details office working conditions and practices drawing upon archival and anecdotal data She analyzes women office workers ambitions and explores how the influences of scientific management personnel management and secondary vocational education affected office workplaces and hierarchies Strom illustrates how businessmen manipulated concepts of scientific management to maintain male dominance and professional status and to confine women to supportive positions She finds that women's responses to the reorganized workplace were varied although they were able to advance professionally in only limited ways they used their jobs as a means of pursuing friendships education and independence

Engineering Trouble: US-Chinese Experiences of Professional Discontent, 1905-1945 Thorben Pelzer,2023-07-31 In the early twentieth century the first large batch of Chinese civil engineers had graduated from the USA and together with their American senior colleagues returned to China They were enthusiastic about reconstructing the young republic by building new railways highways and canals but what the engineers experienced in China including mismanaged railways useless highways and silted canals did not always meet their expectations and ideals In this book Thorben Pelzer makes the stories of these Chinese and American engineers come to life through exploring previously unpublished letters rare images maps and a rich biographical dataset He argues that the experiences of these engineers include a myriad of contradictions disillusionment and discontent keeping the engineering profession in a constant flux of searching for its meaning and its place in Republican China
