Ingeniería Térmica Martín Llorens Morraja, Ángel Luis Miranda Barreras, 2009-03. La Termodinámica es la parte de la Física en sus dos vertientes clásica y estadística que estudia la energía y su transformación de una forma en otra. El estudio puede hacerse de forma macroscópica es decir sin tener en cuenta las peculiaridades de las partículas que integran el sistema. Térmica clásica o bien teniendo en cuenta las propiedades promedio de grandes grupos de partículas. Térmica Estadística. En general se considera que su estudio ofrece algunas dificultades inherentes a ciertas peculiaridades en la formulación y desarrollo de sus leyes. Si nos limitásemos al estudio de los aspectos puramente aplicados perderíamos fácilmente la perspectiva general que todo técnico o ingeniero ha de poseer porque aunque sea cierto en lo particular se ha de tener un buen criterio general en los temas relacionados con los mismos. Un aspecto fundamental de la Termodinámica es el estudio de la transformación de una forma de energía en otra especialmente la de calor en trabajo. Por otra parte la transmisión del calor exige la existencia de un gradiente de temperaturas es decir que la temperatura no sea constante. La Termodinámica estudia la temperatura y el calor pero no específicamente la distribución de temperaturas ante un proceso determinado de transferencia de calor. Dicho con palabras más sencillas la Termodinámica determina la tasa de transferencia de calor y la Termotecnia se ocupa de la distribución de temperaturas. La Ingeniería Térmica pretende efectuar un estudio conjunto de ciertos aspectos fundamentales de la Termotecnia y de la Termodinámica. Así pues la Termotecnia comprende el estudio de la transmisión de calor y de los dispositivos para llevarla a cabo y la Termodinámica el estudio de las leyes fundamentales relacionadas con la energía.
