Moral Error Theory Jonas Olson, 2014-01-23 Jonas Olson presents a critical survey of moral error theory the view that there are no moral facts and so all moral claims are false In Part I History he explores the historical context of the debate and discusses the moral error theories of David Hume and of some more or less influential twentieth century philosophers including Axel H gerstr m Bertrand Russell Ludwig Wittgenstein and Richard Robinson He argues that the early cases for moral error theory are suggestive but that they would have been stronger had they included something like J L Mackie s arguments that moral properties and facts are metaphysically queer Part II Critique focuses on these arguments Olson identifies four queerness arguments concerning supervenience knowledge motivation and irreducible normativity and goes on to establish that while the first three are not compelling the fourth has considerable force especially when combined with debunking explanations of why we tend to believe that there are moral properties and facts when in fact there are none One conclusion of Part II is that a plausible error theory takes the form of an error theory about irreducible normativity In Part III Defence Olson considers challenges according to which that kind of error theory has problematic ramifications regarding hypothetical reasons epistemic reasons and deliberation He ends his discussion with a consideration of the implications of moral error theory for ordinary moral thought and talk and for normative theorizing
