Environmental Protection Through Rural Land Laws Mitike Worku, 2020-02-18 Thesis M A from the year 2018 in the subject Politics Environmental Policy University of Gondar course law language English abstract Using qualitative method this study tries to find out whether the ANRS rural land laws normative and institutional frameworks and their enforcement mechanisms are adequate or not in protecting environmental degradation in rural areas of South Wollo Zone Ethiopia Legal provisions of the ANRS rural land laws which deal with unlimited land use right limited land distribution land right registration and certification obligations to conserve and protect the land expropriation for environmental purpose incentive and the existence of legal remedy will encourage the zone s rural environmental protection However this does not mean that such laws are comprehensive rather such laws fails to comprise all possible obligations of land users lacks clarity and provided in general terms with weak remedies There is also no cooperation mechanism or forum among stockholders in the areas of rural land administration and environmental protection Much attention is given to land administration issues than environmental protection Environmental degradation related to rural land in Ethiopia in general and in ANRS in particular is reflected in the form of land degradation loss and degradation of water resources deforestation as well as decline and or loss of biodiversity Ethiopia has designed a number of environmental laws But such laws suffer from various defects which affect their ability to promote environmental protection So efforts to use laws to protect the rural environment should look beyond just environmental statutes Therefore seeking a solutions and studying rural land administration laws will be helpful to defy land degradation in rural areas The rural land and environmental protection institution also lack financial material and manpower capacities which hold back to carry out its duties Due to these reasons the rural land administration and

environmental protection institutional setup of the Zone remains inadequate to properly protect the rural environment In relation to rural land environmental protection the ANRS rural land laws are practically not enforced in the zone due to the legal gap and unclear less insufficient and political will to enforce the rural land laws So the rural land environment of the South Wollo Zone remains in peril so long as there is no effective and enforced rural land law government commitment and well designed empowered and coordinated institutions

Economics of Land Degradation and Improvement - A Global Assessment for Sustainable Development Ephraim Nkonya,Alisher Mirzabaev,Joachim von Braun,2015-11-11 This volume deals with land degradation which is occurring in almost all terrestrial biomes and agro ecologies in both low and high income countries and is stretching to about 30% of the total global land area About three billion people reside in these degraded lands However the impact of land degradation is especially severe on livelihoods of the poor who heavily depend on natural resources The annual global cost of land degradation due to land use and cover change LUCC and lower cropland and rangeland productivity is estimated to be about 300 billion USD Sub Saharan Africa SSA accounts for the largest share 22% of the total global cost of land degradation Only about 38% of the cost of land degradation due to LUCC which accounts for 78% of the US 300 billion loss is borne by land users and the remaining share 62% is borne by consumers of ecosystem services off the farm The results in this volume indicate that reversing land degradation trends makes both economic sense and has multiple social and environmental benefits On average one US dollar investment into restoration of degraded land returns five US dollars The findings of the country case studies call for increased investments into the rehabilitation and restoration of degraded lands including through such institutional and policy measures as strengthening community participation for sustainable land management enhancing government effectiveness and rule of law improving access to markets and rural services and securing land tenure The assessment in this volume has been conducted at a time when there is an elevated interest in private land investments and when global efforts to achieve sustainable development objectives have intensified In this regard the results of this volume can contribute significantly to the ongoing policy debate and efforts to design strategies for achieving sustainable development goals and related efforts to address land degradation and halt biodiversity loss

Multifunctional Rural Land Management Floor Brouwer,C. Martijn van der Heide,2012-05-16 The increasing demand for rural land and its natural resources is creating competition and conflicts Many interested parties including farmers nature conservationists rural residents and tourists compete for the same space Especially in densely populated areas agriculture recreation urban and suburban growth and infrastructure development exert a constant pressure on rural areas Because land is a finite resource spatial policies which are formulated and implemented to increase the area allocated to one use imply a decrease in land available for other uses As a result at many locations multi purpose land use is becoming increasingly important This notion of multi purpose land use is reflected in the term multifunctionality This volume provides insights into viable strategies of sustainable management practices allowing multiple functions sustained by

agriculture and natural resources in rural areas It shows how the rural economy and policies can balance and cope with these competing demands and includes numerous case studies from Europe North America and developing countries *El Salvador, Rural Development Study*, 1998 Although El Salvador has recorded impressive overall economic growth in the 1990s during this period agricultural growth has lagged considerably below the rest of the economy which raises concerns about the long run capacity of the sector to raise incomes and employment in rural areas and contribute to overall growth The main objectives of this sector review are twofold to develop a strategy to revitalize the agricultural sector and realize its full potential for efficient and sustainable growth by enhancing competitiveness and to present the main findings of the analysis of rural poverty and develop its implications for the design of a strategy for poverty alleviation

Rural and Regional Futures Anthony Hogan, Michelle Young, 2014-09-19 Agriculture mining and related rural industries have been central to the development of Australia's economy This book details the role that the Australian Government has played in the making of rural and regional Australia particularly since World War II The book reviews these policies and evaluates them with regards the commitments undertaken by the Government to contribute towards vibrant rural communities Policy areas addressed include agriculture water education welfare and population natural resource management resource extraction Indigenous and affairs localism rural research and regional innovation Youth Affairs and the devolution of regional governance Overall two distinct policy strategies can be observed one wherein the government saw its role as part of the entrepreneurial state and a sector wherein government has increasingly taken itself out of industry development leaving this role to the market Having considered these strategies and their impacts the book concludes that policy over the past 40 years has not in fact contributed to a more vibrant prosperous rural and regional Australia Rural and Regional Futures concludes with several chapters looking to the future One chapter explores what the role of the state can be within a social market economy while the final chapter gives consideration to the initial steps rural communities will need to take to begin the process of revitalisation While these materials present as a case study of developments in Australia the policy shift from the Government as entrepreneur to a focus on markets is an international one and as such the insights offered by this book will have wide appeal

Rural Land Change and the Capacity for Ecosystem Conservation and Sustainable Production in North America Alisa W. Coffin, Mark A. Drummond, David R. Huggins, Fardausi Akhter, 2022-04-26 [Demands On Rural Lands](#) Chris Cocklin, 2019-04-09 Planning

for the use of rural lands in the developed countries of the world has become an increasingly contentious process as resources become more limited and conflicting needs grow stronger. The critical questions are Which is more important agriculture livestock production recreation industry or urban housing and Who decides priorities and responsibilities for use. The capacity of the land to meet all of the demands placed upon it without serious environmental disruption has become a major concern for all. Recognizing the exigencies of the situation the contributors define and evaluate the theoretical and methodological frameworks within which rural land use problems can be analyzed. In the discussions focus on the identification and characterization of resources and competing users of rural lands stressing that a careful articulation of the problem is essential to effective planning is aimed at developing appropriate information bases useful in planning for the problems related to the management of these rural lands. The discussion of policy options for rural resource use in builds upon the material in the previous two sections to provide a framework for an analysis of rural resource use.

The Rural

Richard Munton, 2017-05-15 The rural has long been regarded as an important site of geographical inquiry even if our understanding of it has not always been treated as conceptually different from the urban. That said rural research has pursued a number of distinct empirical agendas ranging from the operation and impacts of agribusiness to local resistance to global food supply chains to differing representations of the rural. In doing so rural geographers have critically examined the relevance and significance of ideas drawn from numerous traditions including political economy ecological modernization and cultural theory amending them as appropriate in their search to understand the nature and trajectory of rural areas. Up until the 1980s attention remained largely focused upon agriculture as the primary land use but increasingly new forms of rural consumption housing recreation nature conservation have taken centre stage as the primacy of local agricultures has been undermined by reduced state protection and new rural populations which have migrated out from the city. More recently research has been dominated by the cultural turn with particular emphases upon society nature relations interpretations of landscape marginalised others and analyses of the relations between representation and practice. In the last decade a more holistic view of the rural bringing together different aspects of the two previous themes has emerged through more politically oriented studies of rural governance concerned with the functioning of interest groups participation protest and the allocation and management of resources. The volume is thus structured into three sections concerned with agriculture and food the rural and rural governance. The great majority of the selected papers combine both empirical material often highly informative case studies and important conceptual arguments about change in the rural condition that can be linked to ideas being employed elsewhere in Geography and the Social Sciences more generally. These critical reflections have been drawn very largely from research conducted in advanced economies which at least provide some commonality of experience allowing the transfer of ideas between what otherwise might be seen as very differing geographical contexts.
