Selected Papers Of Prof. Zhang Zhong:

Selected Papers of Professor Zhang Zhong-jun Zhong-jun Zhang, Shun-tian Lou, 1990

Selected Papers II, with Commentaries Chen Ning Yang, 2013 This book is a collection of Professor Chen Ning Yang's personally selected papers 1971-2012 supplemented by his commentaries. Its contents reflect the professor's changing interests after he reached age sixty.

Selected Papers Of Chen Ning Yang II: With Commentaries Chen Ning Yang, 2013-05-10 Professor Chen Ning Yang, an eminent contemporary physicist, was Professor at the Institute for Advanced Study Princeton, New Jersey, from 1955 to 1966 and Albert Einstein Professor of Physics at the State University of New York at Stony Brook until his retirement in 1999. He has been Distinguished Professor at Large at the Chinese University of Hong Kong since 1986 and Professor at Tsinghua University Beijing since 1998. Since receiving his PhD from the University of Chicago in 1948, Prof. Yang has made great impacts in both abstract theory and phenomenological analysis in modern physics. In 1983 he published *Selected Papers 1945-1980 With Commentary*. It has been considered by Freeman Dyson as one of his favorite books. The present book is a sequel to that earlier volume. It is a collection of his personally selected papers 1971-2012 supplemented by his insightful commentaries. Its contents reflect Professor Yang's changing interests after he reached age sixty. It also includes commentaries written by him in 2011 when he is 89 years old. The papers and commentaries in this unique collection comprise a remarkable personal and professional chronicle shedding light on both the intellectual development of a great physicist and on the nature of scientific inquiry.

Selected Papers Of Kun Huang (With Commentary) Bang-fen Zhu, 2000-04-19 Professor Kun Huang is widely known for his collaboration with Max Born in writing the classic monograph *Dynamical Theory of Crystal Lattices*. During his years of active research, he has made many important contributions to solid state physics. The present collection of papers is selected at his own choice as representing his most influential works. Thus, one finds included his pioneering work on the interaction of radiation field with polar lattices and the resulting coupled vibration modes later known as polariton; the systematic development of his theory of radiative and nonradiative multiphonon transition processes associated with lattice relaxation; his early prediction of diffuse X-ray scattering due to crystal defects; and his recent research works on low-dimensional semiconductor structures, etc. Professor Huang has found by his experience that scientists interested in these papers often want to know more particulars underlying the research work background, motivation, and rationale involved, etc. Thus, he was led to write a commentary which is published alongside the papers.

Large Scale Systems Bao Liu, Ting Chen, Y. P. Zheng, 1993 Hardbound This volume covering both the theoretical and applied aspects of large scale systems (LSS) presents both the state of the art and current trends of development. Ideas are also presented on reviving the growth of LSS and applying experience to industry and society. Subjects include data and interaction analysis, decomposition, partition, hierarchical and decentralized control, robustness and safety control structures, reliability, conflict resolution, knowledge based systems, and others.

Discussion of Cold Damage (Shang Han Lun)

Guohui Liu,2015-11-21 A major new translation of the Chinese classic Shang Han Lun by scholar and medical doctor Guohui Liu makes this foundational text fully accessible to English speaking clinicians for the first time Extensive study and research underpins the translation the author s understanding of both classical and modern Chinese enables him to interpret fully the ancient work within the theory of Chinese medicine An extensive commentary explains the translation the difficulties with the text how it has been subsequently translated and expands on the theory laid out in the original text to reach an understanding that can be applied in the clinic for diagnosis and treatment The value of this classic text lies primarily in its establishment of a basic framework for differentiation and treatment but it also presents 112 formulas and 88 medicinal substances which are commonly applied in clinical work for various conditions In this edition the 112 formulas are fully explained in the context of the clinical experiences of well known ancient and modern doctors and they are also laid out in two appendices cross referenced to the text **Pattern Recognition and Machine Intelligence** Sankar K.
