Selected Papers On Computer Controlled Optical Surfacing Spie Milestone Series Vol Ms 4:

3D Imaging, Analysis and Applications Yonghuai Liu, Nick Pears, Paul L. Rosin, Patrik Huber, 2020-09-11 This textbook is designed for postgraduate studies in the field of 3D Computer Vision. It also provides a useful reference for industrial practitioners for example in the areas of 3D data capture, computer aided geometric modelling and industrial quality assurance. This second edition is a significant upgrade of existing topics with novel findings. Additionally, it has new material covering consumer grade RGB D cameras, 3D morphable models, deep learning on 3D datasets as well as new applications in the 3D digitization of cultural heritage and the 3D phenotyping of crops. Overall, the book covers three main areas: 3D imaging including passive 3D imaging, active triangulation, 3D imaging active time of flight, 3D imaging consumer RGB D cameras and 3D data representation and visualisation, 3D shape analysis including local descriptors, registration, matching, 3D morphable models and deep learning on 3D datasets and 3D applications including 3D face recognition, cultural heritage and 3D phenotyping of plants. 3D computer vision is a rapidly advancing area in computer science. There are many real world applications that demand high performance 3D imaging and analysis and as a result many new techniques and commercial products have been developed. However, many challenges remain on how to analyse the captured data in a way that is sufficiently fast, robust and accurate for the application. Such challenges include metrology, semantic segmentation, classification and recognition. Thus, 3D imaging analysis and their applications remain a highly active research field that will continue to attract intensive attention from the research community with the ultimate goal of fully automating the 3D data capture, analysis and inference pipeline.
