Selected Papers From The 1995 Telecommunications Policy Research Conference:

The Internet and Telecommunications Policy Gerald W. Brock, Gregory L. Rosston, 1996 This book is based on the Telecommunications Policy Research Conference which reports on research into telecommunications policy issues While the conference is now a respectable 23 years old this is only the second printed edition of selected papers A new law the Telecommunications Act of 1996 accelerated the process of integration in the communication industry and made major revisions to the Communications Act of 1934 that increase the incentive for integration within the industry Although the papers in this volume were written prior to the passage of the new law their importance is merely enhanced by it They deal with fundamental complex policy problems that arise when previously separate segments of the telecommunications industry are integrated rather than specific regulatory rules that are likely to be changed under the new law With the passage of this law the timeframe for developing appropriate policies for an integrated industry has been shortened Changes expected to occur over a period of several years will now likely occur much more rapidly These papers provide insights to help guide the transition in the industry Divided into five parts this volume deals with problems of transforming local exchange telephone service from a monopoly in each geographical area to an interconnected competitive network of networks considers the pricing problems that arise in an integrated network carrying traffic of different types across multiple service providers examines the problem of achieving interoperability in complex networks considers issues of intellectual property that arise in expected integrated networks of the future and discusses electronic publication of scholarly journals copyright protection and the applicability of copyright law in the digital age *Competition, Regulation, and Convergence* Sharon E. Gillett, Ingo Vogelsang, 1999-09-01 The telecommunications industry has experienced dynamic changes over the past several years and those exciting events and developments are reflected in the chapters of this volume The Telecommunications Policy Research Conference TPRC holds an unrivaled place at the center of national public policy discourse on issues in communications and information TPRC is one of the few places where multidisciplinary discussions take place as the norm The papers collected here represent the current state of research in telecommunication policy and are organized around four topics competition regulation universal service and convergence The contentious competition issues include bundling as a strategy in software competition combination bidding in spectrum auctions and anticompetitive behavior in the Internet Regulation takes up telephone number portability decentralized regulatory decision making versus central regulatory authority data protection restrictions to the flow of information over the Internet and failed Global Information Infrastructure initiatives Universal service addresses the persistent gap in telecommunications from a socioeconomic perspective the availability of competitive Internet access service and cost modeling The convergence section concentrates on the costs of Internet telephony versus circuit switched telephony the intertwined evolution of new services new technologies and new consumer equipment and the politically charged question of asymmetric regulation of Internet telephony and conventional telephone service The

Electronic Grapevine Diane L. Borden, Kerric Harvey, 2013-11-05 The widespread use of the Internet as a tool for gathering and disseminating information raises serious questions for journalists and their readers about the process of reporting information Using virtual sources and publishing online is changing the way in which journalism takes place and its effect on the society it serves USE LAST THREE PARAGRAPHS ONLY FOR GENERAL CATALOGS The Electronic Grapevine explores the use of online media by reporters in the United States and examines the impact that usage may have on how journalism is framed in the cultural sphere as well as how it is conducted in the professional one It contains a mix of material examining how it feels to do online journalism how it affects those who consume it different ways that media scholars go about trying to understand it better and the likely social and cultural impact of Internet like technologies on the public at whom all this electronic information is eventually aimed Drawing from the emerging scholarly work in the field and from the real life experiences of working journalists Borden and Harvey collect contributions that examine why journalists use the Internet what changes it makes in how they approach their jobs and what differences they see in conducting their daily newsgathering with this medium rather than other methods The volume also analyses when and why journalists do not use online media and what the impact of the decision to use or not use the Internet may mean for the outer world whose perceptions of itself are so often shaped by journalistic portrait This series of thought provoking original essays explores the impact of computer based information and communication services on traditional journalistic routines and practices and thereby addresses a critical gap in the scholarly literature on communication law and culture Distinguishing between linkage devices like the Internet and database resources such as LEXIS NEXIS America Online and others this book examines the ways in which both types of online services may reshape and redefine not only the products of journalistic effort but the newsgathering process itself

The First 100 Feet Deborah Hurley, James H. Keller, 1999-07-06 The growth of the Internet has been propelled in significant part by user investment in infrastructure computers internal wiring and the connection to the Internet provider This bottom up investment minimizes the investment burden facing providers New technologies such as wireless and data transmission over power lines as well as deregulation of telecommunications and electric utilities will provide new opportunities for user investment in intelligent infrastructure as leverage points for Internet and broadband access Recasting the problem of the last 100 feet as the opportunity of the first 100 feet this book challenges individuals businesses and policymakers to rethink fundamental issues in telecommunications policy The contributors look at options for Internet and broadband access from the perspective of homeowners apartment complexes and small businesses They evaluate the opportunities and obstacles for bottom up infrastructure development and the implications for traditional and alternative providers at the neighborhood regional and national levels Already some argue that Internet service will become the common denominator platform on which all other services can be carried A Publication of the Harvard Information Infrastructure Project

Wireless Brian J.W. Regli,2020-07-24 The revolution of wireless communications has only just begun to transform the telecommunications industry worldwide This book offers insight into the possible options for corporate strategists and government policymakers as they look to harness the expansion of wireless communications to meet the goals of sustainable telecommunications development Using a multidisciplinary approach which combines policy research legal analysis business economics and models of sustainability from the environmental sciences the book compares the development of wireless communications in four countries the United States the United Kingdom Russia and Brazil The comparative analysis points to common themes and opportunities including breaking down the barriers between wireless and wireline access by changing the regulatory design which constrains service providers targeting the development potential of wireless access through the utilization of new technologies and service models and using wireless access as the basis for full facilities based competition in both developing and developed world markets No other book today offers this broad a context for a discussion of wireless communications and its potential impact on the evolution of the telecommunications industry **The Economics, Technology and Content of Digital TV** Darcy Gerbarg,2012-12-06 As the world of television moves from analog to digital

political and economic forces are being brought to bear on companies as they attempt to deal with changes occurring in their industries. The impetus for the conversion from analog to digital TV comes from many quarters including the broadcasting industry, the computer industry, governments, consumer electronics manufacturers, content developers, and the Internet. The widespread acceptance of digital technology in both the home and the workplace accounts for the ready acceptance of the belief that the move to digital television is an appropriate advancement. Not all authors in this volume, however, are believers. This book is divided into four sections, each dealing with one aspect of the transition from analog to digital TV broadcasting. The first section presents the various technologies. It establishes a structure for understanding the technologies currently in use as well as those being developed by the industries involved in the delivery of digital television. Section two presents information about consumer TV viewing and includes examples of innovative, experimental, interactive programs. Economics and financial issues are addressed from a variety of perspectives in section three. Section four concludes the book with a look at the international environment and the history of digital TV globally.

Interconnecting the Network of Networks Eli M. Noam, 2001-08-17 This book describes the transformation of telecommunications from national network monopolies to a new system, the network of networks, and the glue that holds it together: interconnection. By their very nature, monopoly-owned networks provided a small number of standardized nationwide services. Over the past two decades, however, new forces in the world economy began to unravel this traditional system. The driving force behind the change was the shift toward an information-based economy. Especially for large organizations, the price, control, security, and reliability of telecommunications became variables requiring organized attention. Thus, monopoly began to give way to the network of networks, the foundation of today's telecommunications and Internet infrastructure. Taking a broad multidisciplinary perspective, Eli Noam discusses the importance and history of interconnection policy as well as recent policy reforms both within the United States and around the globe. Other important topics he discusses include interconnection prices, the unbundling of interconnection, and the technology of interconnection. He concludes with an examination of social and policy issues, including the free flow of content, universal service, and privacy protection, and the future of telecommunications.

The Virtual Utility Shimon Awerbuch, Alistair Preston, 2012-12-06 In the winter of 1996, after 4 years of planning and research, the Symposium on the Virtual Utility was held in Saratoga Springs, New York. It was sponsored by Niagara Mohawk Power Corporation. Co-sponsored by CSC Index and the New York State Energy Research and Development Authority, and hosted by Rensselaer Polytechnic Institute, Troy, NY. The symposium sought to identify new areas of inquiry by presenting cutting-edge academic and practitioner research intended to further our understanding of the strategic, technologically driven issues confronting the electricity production and distribution process. The program sought to offer new insights into rapid changes in the utility industry, in part by examining analogues from manufacturing and telecommunications. In addition to identifying new research areas, the symposium yielded a number of important findings and conclusions. This volume

contains the presented papers of the meeting the discussant reports and two special papers prepared by the meeting rapporteurs who performed superbly in analyzing synthesizing explaining and generally bringing a cohesive perspective to the interesting yet complex set of ideas presented at this unique meeting We would like to acknowledge the people and organizations that contributed to this effort We thank Niagara Mohawk Power Corporation and Albert Budney its President Chief Operating Officer for sponsoring this project and Andrew Vesey Vice President I whose vision support and championing made this project possible
