Selected Papers In Biochemistry10 Vols:

Selected Topics in the History of Biochemistry G. Semenza, 2012-12-02 Selected Topics in the History of Biochemistry Personal Recollections I presents selected topics in the history of biochemistry based on the authors personal recollections These topics range from the isolation of Cori ester and the discovery of sugar nucleotides to the work of Frederick Gowland Hopkins 1861 1947 Ion coupled membrane processes are also discussed along with fructose and fructose 2 6 biphosphate as well as lysosomes and glycogen Comprised of 12 chapters this volume begins with the discovery of Cori ester and the concept of phosphorolysis before turning to the discovery of sugar nucleotides and research on ion coupled membrane processes The reader is then introduced to studies of fructose fructose 2 6 biphosphate lysosomes and glycogen the contributions of Frederick Gowland Hopkins in biochemistry and a short autobiography of Juda Hirsch Quastel with emphasis on his research work on the concept of active centers as a possible explanation of enzyme action and his investigation of the effects of malonic acid and substituted malonic acids on bacterial dehydrogenases The remaining chapters focus on a biochemist s approach to autopharmacology the early development of modern protein chemistry in Uppsala Sweden and the biographies of two Russian scientists A N Bach and Sergei E Severin This monograph will be of interest to students practitioners and researchers in the field of biochemistry **English Abstracts of Selected Articles**

from Soviet Bloc and Mainland China Technical Journals ,1962 **Selected Topics from Neurochemistry** Neville N. Osborne, 2013-10-22 This book contains up dated versions of articles which proved very popular when first published in Neurochemistry International The articles draw attention to developments in a specific field perhaps unfamiliar to the reader collating observations from a wide area which seem to point in a new direction giving the author s personal view on a controversial topic or directing soundly based criticism at some widely held dogma or widely used technique in the neurosciences Chemical Biology, Selected Papers Of H G Khorana (With Introductions) H Gobind Khorana, 2000-05-24

The first two chapters of this invaluable book trace the developments of the chemistry and macromolecular structures respectively of proteins and nuclei acids Similarly the introductions to the succeeding chapters review step by step the historical landmarks in the topics covered These include discoveries of biological phosphate esters nucleotides and nucleotide coenzymes important in intermediary metabolism the nature of the genetic material and biological synthesis of proteins formulation of the problem of the genetic code and perspectives on bioenergetics The selected papers illustrate the developments of the chemical synthesis of nucleotides and nucleotide coenzymes of ribo and deoxy ribo polynucleotides RNA DNA of the total synthesis of genes in the laboratory and principles for gene amplification PCR Another major section covers studies of enzymes that degrade nucleic acids the structure of transfer RNA and its role in protein synthesis and the author s work on the elucidation of the genetic code Finally there are descriptions of the studies on biological membranes and the membrane protein bacteriorhodopsin a biological proton pump These studies elucidated the mechanism of proton

translocation which is central to bioenergetics *The Lesser Bushbaby (Galago) as an Animal Model: Selected Topics* Duane E. Haines, 2019-08-08 It is not the goal of the present volume to promote Galago as an animal model but to alert investigators to the potential thereof In this respect this collection of papers serves as a general introduction The subjects covered are purposefully broad so as to illustrate that Galago not only has been but may be utilized with success in a variety of research areas Most papers deal with the pros and cons of utilizing Galago in a specific line of research and in many instances discuss potential problems which may arise The established value of the lesser bushbaby in particular research endeavour is also discussed and illustrated by some contributors *Laboratory Apparatus and Reagents Selected for Laboratories of Chemistry and Biology* Thomas, Arthur H., company, Philadelphia, 1921 Frederick Sanger Joe S. Jeffers, 2017-03-14 In this Brief Joe Jeffers uncovers the life and works of two time Nobel Laureate Frederick Sanger Following Sanger's early life to retirement Jeffers describes how this celebrated British biochemist became the first person to determine the amino acid sequence of a protein for which he was awarded the Nobel Prize in 1958 Highlighting Sanger's remarkable career Jeffers describes Sanger's later change in research direction to investigate deoxyribonucleic acids DNA work for which Sanger also received the Nobel Prize jointly with Paul Berg and Walter Gilbert in 1980 Joe Jeffers conducted twelve interviews with Sanger over the period of 1999-2009 and he has also spoken to more than 40 of Sanger's colleagues and family members This brief provides a rigorous yet concise view of Sanger on a personal and scientific level and is suitable for biochemists, historians or the interested layperson **Mechanism of Muscular Contraction** Jack A. Rall, 2014-10-21 This book describes the evolution of ideas relating to the mechanism of muscular contraction since the discovery of sliding filaments in 1954 An amazing variety of experimental techniques have been employed to investigate the mechanism of muscular contraction and relaxation Some background of these various techniques is presented in order to gain a fuller appreciation of their strengths and weaknesses Controversies in the muscle field are discussed along with some missed opportunities and false trails The pathway to ATP and the high energy phosphate bond will be discussed as well as the discovery of myosin contraction coupling and the emergence of cell and molecular biology in the muscle field Numerous figures from original papers are also included for readers to see the data that led to important conclusions This book is published on behalf of the American Physiological Society by Springer Access to APS books published with Springer is free to APS members

Selected Papers on Tissue Optics Valerii Viktorovich Tuchin, 1994 SPIE Milestones are collections of seminal papers from the world literature covering important discoveries and developments in optics and photonics Selected Water Resources Abstracts, 1976-03 **Technical Translations**, 1964-04 **Molecular and Cellular Biophysics** Meyer B. Jackson, 2006-01-12 Molecular and Cellular Biophysics provides advanced undergraduate and graduate students with a foundation in the basic concepts of biophysics Students who have taken physical chemistry and calculus courses will find this book an accessible and valuable aid in learning how these concepts can be used in biological research The text provides a

rigorous treatment of the fundamental theories in biophysics and illustrates their application with examples Conformational transitions of proteins are studied first using thermodynamics and subsequently with kinetics Allosteric theory is developed as the synthesis of conformational transitions and association reactions Basic ideas of thermodynamics and kinetics are applied to topics such as protein folding enzyme catalysis and ion channel permeation These concepts are then used as the building blocks in a treatment of membrane excitability Through these examples students will gain an understanding of the general importance and broad applicability of biophysical principles to biological problems *Scientific and Technical Aerospace Reports* ,1965 **STAR** ,1965 Nuclear Science Abstracts ,1973 *New Technical Books* New York Public Library,1926 **Canadian Journal of Biochemistry** ,1970 **Index of Conference Proceedings Received** British Library.
