An Economic Assessment of Banana Genetic Improvement and Innovation in the Lake Victoria Region of Uganda and Tanzania Melinda Smale, W. Tushemereirwe, 2007 This report assesses the impact on smallholder farmers of technology options developed by Uganda's National Agricultural Research Organization NARO to improve the productivity of the East African highland banana a major crop in Uganda and Tanzania The contributors survey an array of options either currently practiced or under development including improved soil fertility management practices conventional banana improvement and transgenic banana cultivars Their survey produces a number of findings with important implications for banana production a recently developed banana hybrid adopted in Tanzania reduced the vulnerability of Tanzanian households to yield losses from pests

and disease a strong network of social ties among farmers facilitates the spread of best soil fertility management practices through farmer to farmer exchange and transgenic bananas currently being developed could have pro poor impact Drawing on simulations of the economic benefits of these and other technology options the contributors conclude that the current strategy endorsed by NARO of combining conventional and transgenic approaches to mitigate the biotic pressures that cause major economic losses is essential for sustaining banana production systems The report serves as a valuable baseline for researchers and others interested in measuring the effectiveness of crop improvement programs *Proceedings of Eurocogsci 03* Franz Schmalhofer, Richard M.  fruit in the United States have been linked to Miss Chiquita and Carmen Miranda banana republics and Banana Republic
 clothing stores everything from exotic kitsch to Third World dictatorships to middle class fashion But how did the rise in
 banana consumption in the United States affect the banana growing regions of Central America In this lively interdisciplinary
 study John Soluri integrates agroecology anthropology political economy and history to trace the symbiotic growth of the
 export banana industry in Honduras and the consumer mass market in the United States Beginning in the 1870s when
 bananas first appeared in the U S marketplace Soluri examines the tensions between the small scale growers who dominated
 the trade in the early years and the shippers He then shows how rising demand led to changes in production that resulted in
 the formation of major agribusinesses spawned international migrations and transformed great swaths of the Honduran
 environment into monocultures susceptible to plant disease epidemics that in turn changed Central American livelihoods
 Soluri also looks at labor practices and workers lives changing gender roles on the banana plantations the effects of
 pesticides on the Honduran environment and people and the mass marketing of bananas to consumers in the United States
 His multifaceted account of a century of banana production and consumption adds an important chapter to the history of
 Honduras as well as to the larger history of globalization and its effects on rural peoples local economies and biodiversity
Bananas and Plantains S. Gowen,2012-12-06 In a field of mature bananas plants can be seen at all stages of vegetative
 growth and fruit maturity providing a fascination for anyone who has an interest in growing crops Banana farmers in the
 tropics can harvest fruit every day of the year The absence of seasonality in production is an advantage in that it provides a
 continuity of carbohydrate to meet dietary needs as well as a regular source of income a feature that perhaps has been under
 estimated by rural planners and agricultural strategists The burgeoning interest in bananas in the last 20 years results from
 the belated realization that Musa is an under exploited genus notwithstanding the fact that one genetically narrow group the
 Cavendish cultivars supply a major export commodity second only to citrus in terms of the world fruit trade International
 research interest in the diversity of fruit types has been slow to develop presumably because bananas and plantains have

hitherto been regarded as a reliable backyard source of dessert fruit or starch supplying the needs of the household and in this situation relatively untroubled by pests diseases or agronomic problems **The Dialects of Spanish** Travis D.
