In its essence, the materials selection process, which is a critical task in modern engineering design and manufacturing, is regarded to be an information processing routine. The engineering design process, including the selection of materials in design, is regarded to be a decision making process in which choices are made from among the available alternatives. Development and use of a materials selection process, or materials selection processes, based on the principles of decision theory and information processing is called for. The process or processes so developed should be implemented on digital computer to take advantage of the computer's immense capacity for information processing. This would comprise an important component of computer-aided engineering.

1. Introduction

All manufactured products, constructed structures, and infrastructure, everything from toys, domestic utensils, and furniture, to agricultural, commercial, and industrial machines, to roads, bridges, and dams, is made of material. Therefore, at some point in the process of engineering design, decisions have to be made as to which materials and what processes will be used in order to realize the product. The importance of materials to mankind is perhaps best underscored by the fact that epochal eras in civilization have been identified by the materials that were then in prevalent use. The bronze age, the iron age, and the stone age are examples of this practice.

The engineering profession may be defined as “the art and science of harnessing the **information, materials and energy** resources that occur in nature, for the benefit of mankind.” Moreover, on a little reflection, it should be evident that the basic ingredients of any technology are energy, information, and materials. Materials, therefore, must be of great interest to the engineer. The engineers’ interest in materials may be drawn to diverse aspects such as *The Materials Science Aspect*, and *The Materials Management Aspect*. However, to design and manufacturing engineers, it is *The Materials Selection Aspect* that should be of most interest. Until recently, this particular aspect has often not been adequately addressed in the common literature on engineering design and manufacturing.

Material Selections by a Hybrid

Multi-Criteria Approach Fabrizio D'Errico, 2015-01-16 This Brief presents a new method that is based on the author and his students' shared experience in applying a structured procedure that has as its main goal the creation of a material selection technique that uses language and employs a platform that is not restricted to engineers. Based on a hybrid approach that exploits both traditional and semi-quantitative concepts, it moves forward step by step and uses a platform based on a Quality Function Deployment matrix framework. Candidate materials are screened out and finally assessed by two user-friendly graphic analysis tools: one based on the value curve of the product and the other on an original Bubble Maps tool. The Brief is written for all those whose aim is for a better understanding of how to integrate and speed up the entire product development process from the initial product concept and engineering design phases to design specs, manufacturability, and product marketing with optimal choice of materials.

Introduction to Manufacturing Processes and Materials Robert Creese, 2017-12-19 The first manufacturing book to examine time-based break-even analysis, this landmark reference text applies cost analysis to a variety of industrial processes employing a new problem-based approach to manufacturing procedures, materials, and management. An Introduction to Manufacturing Processes and Materials integrates analysis of material costs and process costs, yielding a realistic, effective approach to planning and executing efficient manufacturing schemes. It discusses tool engineering, particularly in terms of cost for press work, forming dies, and casting patterns; process parameters such as gating and riser design for casting feeds; and more.

Materials Selection and Design Md Abdul Maleque, Mohd Sapuan Salit, 2013-12-11 This book presents topics on the basics of materials selection and design, which will give a better understanding of the selection methods and then find suitable materials for the applications. This book draws the simple and straightforward quantitative methods followed by knowledge-based expert system approach with real and tangible case studies to show how undergraduate or postgraduate students or engineers can apply their knowledge on materials selection and design. Topics discussed in this book contain special features such as illustration tables and tutorial questions for easy understanding. A few published books or documents are available; hence, this book will be very useful for those who use or want to use materials selection approach without the advantages of having had comprehensive knowledge or expertise in this materials world.

DeGarmo's Materials and Processes in Manufacturing Ernest Paul DeGarmo, J. T. Black, Ronald A. Kohser, 2011-08-30 Now in its eleventh edition, DeGarmo's Materials and Processes in Manufacturing has been a market-leading text on manufacturing and manufacturing processes courses for more than fifty years. Authors J. T. Black and Ron Kohser have continued this book's long and distinguished tradition of exceedingly clear presentation and highly practical approach to materials and processes, presenting mathematical models and analytical equations only when they enhance the basic understanding of the material. Completely revised and updated to reflect all current practices, standards, and materials, the eleventh edition has new coverage of additive manufacturing, lean engineering, and processes.
