## **Selective Neurotoxicity:**

**Site-Selective Neurotoxicity** David S Lester, William Slikker Jr, Philip Lazarovici, 2002-02-07 This unique volume provides interdisciplinary coverage of the mechanistic perspective of neurotoxicity that focuses on the site of action of known neurotoxins. It provides the reader with an insight into the common characteristics of neurotoxin action on the nervous system and examines sites of action at three levels of complexity: molecular, cellular, and systemic. **Selective Neurotoxicity** Hans Herken, Ferdinand Hucho, 2012-12-06 Following the overwhelmingly successful response to the first printing in hardcover, the hottest topics in Selective Neurotoxicity are now available in this special softcover edition. Researchers are provided with well-grounded information on the cellular and subcellular targets of neurotoxins and their mode of action at the level of ion channels, receptors, and neurotransmitters. The use of bacterial toxins as a tool in neuroscientific research is an important aspect in this context. The chapters that interest clinicians as well deal with protective barriers in the peripheral and central nervous system and metabolic disorders that cause neurotoxins to be built up in the human body. The induction of tumors by neurotropic carcinogens is included. **Handbook of Neurotoxicity** Richard M. Kostrzewa, 2023-01-02 This handbook is a reference source for identifying, characterizing, instructing on use, and describing outcomes of neurotoxin treatments to understand mechanisms associated with toxin use to project outcomes of neurotoxin treatments to gauge neurotoxins as predictors of events leading to neurodegenerative disorders and as aids to rational use of neurotoxins to model disease entities. Neuroprotection is approached in different manners, including those 1) afforded by therapeutic agents (clinical and preclinical) or 2) by non-drug means such as exercise. The amorphous term neurotoxin is discussed in terms of the possible eventuality of a neuroprotectant producing an outcome of excess neuronal survival and a behavioral spectrum that might produce a dysfunction akin to a neurotoxin's effect. This new edition significantly expands on the information provided in the first edition, providing the latest research in neurotoxicity and highlighting the relationship between specific neurotoxins and the neurodegenerative disorders they can cause. It also includes new sections on the neurotoxicity of heavy metals, fungi, and snake venom. The Handbook of Neurotoxicity is thus an instructive and valuable guide towards understanding the role of neurotoxins in the expansive field of Neuroscience and is an indispensable tool for laboratory investigators, neuroscientists, and clinical researchers. Milestones in Neurotoxicity and Neuroprotection: A Tribute to Professor Toshiharu Nagatsu M. Naoi, W. Maruyama, M.A. Collins, M.B.H. Youdim, S. Hasan Parvez, 2002-09-25 This book summarizes recent advances in understanding the mechanism underlying the selective cell death of dopamine neurons in Parkinson's disease. MPTP, endogenous neurotoxins L-DOPA, and metal were proved to induce apoptosis and necrosis in neurons. The relationship of these causal factors to the pathogenesis of Parkinson's disease was discussed to give us overviews on the role of neurotoxins in this degenerative disorder. This title further presents the intracellular signal transduction and the related enzymes and other factors involved in dopaminergic neuronal death. Recent results on intracellular mechanism of

neuroprotection are presented suggesting that neuroprotection as a causal therapy of neurodegenerative disorders may become practical in near future This book shows new neuroprotective agents such as propargylamine derivatives and neurotrophins and the intracellular mechanism to prevent the activation of apoptotic cascade in neurons The authors of this book are active researchers participating in these subjects and the readers will find the knowledge and techniques for the study on neurotoxicity and neuroprotection and the strategy for future research on these important subjects in clinical and basic neurology and neurosciences The book is dedicated to Professor Toshiharu Nagatsu a pioneer in the search for pathogenic factors in Parkinson s disease The book is reprinted from the journal Neurotoxicology and Teratology Volume 24

Massaro, 2002-03-20 Neurotoxicology is a broad and burgeoning field of research Its growth in recent years can be related in part to increased interest in and concern with the fact that a growing number of anthropogenic agents with neurotoxic potential including pesticides lead mercury and the polycyclic byproducts of combustion and industrial production continue to be spewed into and accumulate in the environment In addition there is great interest in natural products including toxins as sources of therapeutic agents Indeed it is well known that many natural toxins of broadly differing structure produced or accumulated for predatory or defensive purposes and toxic agents accumulated incidentally by numerous species function to perturb nervous tissue Components of some of these toxins have been shown to be useful therapeutic agents and or research reagents Unfortunately some neurotoxicants of anthropogenic origin unfortunately the environmental accumulation of especially pesticides and metals has resulted in incidents of human poisoning some of epidemic proportion and high levels of morbidity and mortality Furthermore an increasing incidence of neurobehavioral disorders some with baffling symptoms is confronting clinicians It is not clear whether this is merely the result of increased vigilance and or improved diagnostics or a consequence of improved health care In any case the role of exposure to environmental and occupational neurotoxicants in the etiology of these phenomena as well as neurodegenerative diseases is coming under increasing scrutiny and investigation
